Lancaster Farming

Serving The Central and Southeastern Pennsylvania Areas

Vol. 20 No. 18

Lancaster Farming, Saturday, March 15, 1975

\$3.00 Per Year

Robert Walker (closest to camera) discussed farm problems with Lancaster County farmers on Wednesday in Congressman Edwin Eshelman's Capitol office. Walker is Eshelman's legislative aide. The farmers talking to Walker are (left to right) Ivan Yost, Christiana R1, James Hess, Quarryville R2, and Donald Hershey, Manheim R2.

John Groff Named Top Conservationist

By Dick Wanner

Conservation is a key element in John B. Groff's farming philosophy. For his cooperation with the Lancaster County Conservation District, Groff was named the county's Outstanding Conservation Cooperator for 1975. He received his award on Thursday evening during the district's annual meeting at the Good 'n Plenty Restaurant, Smoketown.

But soil isn't the only thing Groff conserves on his Mt. Joy R1 farm. He conserves

labor and capital, too, and has a manure handling system that preserves the maximum fertilizer value of this byproduct from his 72-cow dairy herd.

Groff has farmed his 82 acres of rolling fields for the past 15 years. Of the total acreage, some 60 is tillable and the rest is mostly in meadows. About 10 acres are kept in alfalfa and the other 50 acres see double duty every year. Groff plants corn on those 50 acres, chops it for

silage in the fall, and seeds rye in those same fields in October.

Soil loss from Groff's fields is held to a minimum by a double-barreled approach to conservation. Cropland terraces and sod waterways are the practices conservationists recommend for continuous corn programs like Groff's. And Groff has had 11,500 feet of terraces and 2300 feet of waterways since 1969.

Another practice that is gaining favor as a way to minimize soil loss from continuous corn is no-till planting. Groff has been planting no-till corn since 1971. "I didn't really have no-till in mind when we laid out the terraces," Groff told Lancaster Farming when we visited him on Monday.

(Continued on Page 26)

John B. Groff, Mount Joy R1, checks the operation of the special pump which powers his manure irrigation system. Groff was named the Outstanding Conservation Cooperator of the Year on Thursday

Eshelman Sees Hope For Estate Tax Relief

By Dick Wanner

"There's sentiment in Congress to provide estate tax relief for farmers," Congressman Edwin Eshelman told a group of Lancaster County farmers on Wednesday in his Capitol office. "I'm not sure we can get a bill passed this year, but I know we can get a sympathetic hearing. I'm willing to do all I can to support such a bill."

The members of the group were in Washington as part of the Pennsylvania Farmers Association annual Congressional meeting, held Wednesday and Thursday of this week.

When they arrived at his office, the local farmers discovered that Eshelman was tied up with roll call votes and a committee meeting, so they spent most of the time discussing their viewpoints with Robert Walker, the Congressman's legislative aide. Eshelman did break free a few minutes before five and talked about the estate tax and a few other matters.

On the trip to Washington were Mr. and Mrs. Donald Hershey, Manheim R2, Ivan

Yost, Christiana R1, James Hess, Quarryville R2, Mr. and Mrs. James Groff, Kirkwood R1, Verna Frey, Marietta R1 and Marian Brenneman, Mt. Joy R1. Harold Bollinger, a Lebanon County dairy farmer who's in Eshelman's Congressional district, was also with the group.

Ivan Yost, Lancaster County's legislative committee chairman, acted as spokesman for the group. He pointed out to Walker that many farms can't be handed down from generation to generation because of inheritance taxes. Presently, Yost said, the first \$60,000 of an estate passes to the heirs tax free. With farms today being valued at many times \$60,000, inheritance taxes are often so steep that the heirs must sell the land in

order to pay the taxes.

One of PFA's goals, Yost said, is to increase the exemption from \$60,000 to \$200,000 for all estates, including farms. The other is to have farmland valued as farmland for the purposes of estate settlement. Very often, the value of farmland is inflated by its potential for industrial or residential development, whether or not the landowner has any intention of developing the property.

Land use planning was another PFA policy Yost mentioned. He said PFA favors a land use study, but is opposed to any legislation which would impose federal land use standards on states and municipalities. Walker said that Eshelman voted against a federal land use

4-Hers Begin Year With Expo Display

By: Melissa Piper

The Watt and Shand wing of the Park City Shopping Mall took on a new appearance this week with 4-H Clubs from all over Lancaster County displaying booth exhibits in that area for 4-H Expo Week.

Expo week was designed not only to initiate the beginning of the 1975 4-H

season but to try and reach other young people in the county who may not be familiar with the 4-H program and the projects it offers.

Twenty-three clubs vied for prizes by constructing display booths based on some form of 4-H project work or the 4-H program

Youth Group Studies Veterinary Careers

by: Melissa Piper

Most farm youth often have the opportunity to work with animals and practice first hand animal health care. They are also often called upon to help care for sick animals when the need arises. However, youngsters who live either in the city or in the suburbs rarely have the opportunity to work close to animals observing their condition. That is, unless they are members of the Veterinary Explorer Post 509 of Lancaster County.

The Explorer Post is one of the many career oriented programs under the af-

America and offers programs of career study for boys and girls 14-21 years of age.

Post 509 is just two years old and was organized by several county veterinarians who wanted to share their knowledge of the field with high school students who may be interested in pursuing careers in animal industries or veterinary medicine.

The group which consists of nearly 60 youngsters meets every third week for different programs dealing with veterinary medicine. The advisor for the group is

Lisa Emes (left) 1526 Cedar Rd., Lancaster and Lashon Bussell, Manheim R1, pose with a replica of "Mr. Ed" the famous talking horse. The girls are both members of the Boots and Saddles 4-H Horse Club which took first place in the exhibit display at the 4-H Expo

Local Grain

Thursday, March 13
These prices are made up of the average prices quoted by a number of participating local feed and grain concerns. It should be noted, however, that not every dealer or broker handles each commodity. All prices are per bushel except ear corn which is per ton.

The average local grain prices quoted Thursday, March 13, 1975 are as follows:

	Bid+	Offered+
Ear Corn	59.00	65.50
Shelled Corn	2.84	3.07
Oats		
Local	1.65	1.91
Western	—	2.16
Barley	2.20	2.46
Wheat		
Millers	3.20	—
Feed	2.12	2.35
+Bid is the price the dealer will buy from the farmer delivered to the mill.		
Offered is the price the dealer will sell for at his mill.

IMPORTANT NOTICE

LET US HANDLE YOUR FEEDER PIGS

NEXT FEEDER PIG SALE TUES., MARCH 18

Feeder pigs consigned to Walter M. Dunlap and Sons must arrive at the stockyards between 7 A.M. and 11 A.M. the day of the sale. Upon arrival they will be inspected by a veterinarian, tagged, and state graded.

The two sales scheduled for March will be held on Tuesday, the 4th, and Tuesday, the 18th, starting at 1 P.M. Consignors wishing to tag their pigs on the farm can get the tags at the state office at the stockyards, not later than 4 P.M. any day preceding the sale, thereby saving 25 cents per pig.

Consign all your feeder pigs to Walter M. Dunlap & Sons where they will be handled by a capable and experienced staff, and for further information call 717-397-5136.

MARCH 17-23, 1975

Spring is finally here!

Mend your stonewalls now . . . St. Patrick's Day March 17 . . . First quarter of the moon March 20 . . . Spring begins March 21, 1:57 AM EDT . . . Average length of days for week, 12 hours, 5 minutes . . . Night equals day on Tuesday (each is 12 hours long) . . . If the 19th is clear, it'll be a fertile year . . . California Zephyr trains stopped March 22, 1970 . . . Beware equally of a sudden friend and a slow enemy.

Home Hint: The iron-on mending tapes are wonderful for labeling children's clothing.

OLD FARMER'S WEATHER FORECASTS

New England: Early week generally clear and warmer; heavy rain, and sleet and snow in central and north latter part.

Greater New York-New Jersey: Generally clear and mild to start, then turning cooler; rain occasionally mixed with snow at end of week.

Middle Atlantic Coastal: Week begins cloudy and chilly, then heavy rain in south and snow or rain in north; rainy and cool latter part.

Southeast Coastal-Piedmont: Clear and dry at first, then becoming unseasonably warm; end of week rainy and much colder.

Florida: Rain in central and south to start, then clearing and much warmer; scattered light showers and warm latter part.

Upstate & Western N.Y.-Toronto & Montreal: First part of week mostly sunny with some flurries; storm latter part with rain or freezing rain.

Greater Ohio Valley: Clear and nice to start, then rain in west and flurries in east; week ends with occasional shower and colder.

Deep South: Week begins clear and warming up, then becoming very warm; end of week rainy in central and north, then clearing and much colder.

Chicago & Southern Great Lakes: Rain or sleet in west by mid-week, then flurries in east; end of week overcast and cold with flurries.

Northern Great Plains-Great Lakes: Clouding up to start, then snow; end of week clearing and cold in west and snow in central and east.

Central Great Plains: Sunny and mild to midweek, then snow in northeast and showers in east and south; clear and cold latter part.

Texas-Oklahoma: Clear at first, then becoming hot; cold snap at week's end with lows in 20s in central and north.

Rocky Mountain Region: Early week snow in central and north, and clear and mild in south; end of week generally clear and milder.

Southwest Desert: Clear and very warm to start, then much cooler; pleasant and warmer by weekend.

Pacific Northwest: Cold to start, then light snow in north and rainy in south; occasional light rain latter part.

California: Light rain in north and drizzle in south at first, then clearing in north but cloudy in south; end of week clear and mild in south and cool in north.

THIS TWO LEVEL THERMOMETER BELONGS IN YOUR FARROWING HOUSE

Chilling can really hold pigs back. In many farrowing houses, the temperature at piglet level can be a good 15 degrees colder than you feel at eye level.

This chilling difference can trigger a break of pneumonia. That's why many good managers use Tylan® Plus Sulfa in their starter feeds, to control pneumonia.

When pneumonia strikes feeder pigs or hogs of any age use feed containing Tylan® Plus Sulfa to control pneumonia caused by Pasteurella multocida or Corynebacterium pyogenes.

Tylan® registered trade mark Elanco Products Co

For details on how to receive a Free Hog Comfort Zone Thermometer contact YOUR FEED SUPPLIER serviced by New Holland Supply Co.

Central Tractor 4-H Club

Members of the Central 4-H Tractor Club met recently for their seventh weekly meeting at Landis Bros. Implement Company.

Wayne Erb, president, presided at the business meeting with Dale Musser calling the roll.

The club voted to go on several field trips which will include touring the Caterpillar Company.

A demonstration of reflexes in working with machinery was given by Ronald Nolt. The meeting was adjourned following group work sessions.

Buck Pullers Hold Banquet

Some 131 tractor pullers, fans and agribusiness people were on hand last Saturday night for the first annual Buck Tractor Pulls banquet. The event was held in Lancaster County at the Rawlinsville Fire Hall.

The highlight of the evening was the presentation of 48 trophies by Elwood Funk to pullers who had captured the top three place in each class at the Buck last summer. Funk is president of the Buck Tractor Pulls.

Trophies were presented to the following individuals, who are listed by class in the order of their placing.

5000-lb. Open: Clarence Keener, Jr., Dale Smoker and Glenn Darnell.

7000-lb. Open: Lester Landis, Richard Zimmerman and Clarence Keener, Jr.

9000-lb. Open: Lester Landis, Richard Zimmerman and Harry Griest.

7000-lb. Super Stock - Mark Stauffer, Marlin Brubaker and Tom Savage.

9000-lb. Super Stock - Ed Horman, Harry Griest and

Donald Thomas.

12,000-lb. Super Stock - Ed Horman, Harry Griest and Michael Wright.

7000-lb. Modified - Lester Landis, Clarence Keener, Jr., and Richard Zimmerman.

9000-lb. Modified - Lester Landis, Richard Zimmerman and Clifton Budd.

Mini-Farm Coop Meet Scheduled

An organizational meeting of mini-farmers will be held Friday at 8 p.m. in the conference room of the Lancaster Coca Cola Bottling plant on the Manheim Pike. Those attending the meeting will discuss the formation of a cooperative organization whose purpose would be to buy bulk quantities of farm supplies for small landowners not necessarily engaged in commercial agriculture.

MR. DAIRYMAN

We are in an excellent position to give you any size milk tank from 450 gal. to 7000 gal. capacity milk tank.

Whether you operate a large or small dairy operation, the Dari-Kool Bou-Matic bulk milk cooler far exceeds U.S. Gov. and 3A standards for milk cooling. This is reason enough why you should buy Bou-Matic Dari-Kool coolers.

With our trained service technicians, we are able to service your bulk milk tank.

OUR SERVICE IS CONTINUOUS, 24 HRS. A DAY, 7 DAYS A WEEK.

USED BULK MILK TANKS

For Diesel or Electric Installation.

- (1) 600 gal D2 Girton
- (2) 400 gal. Sunset tanks \$800.00 each
- (1) D-2 400 gal. Girton \$1200.00
- (1) 300 gal. Esco
- (1) 350 gal. Esco
- (1) 400 Jamesway
- (1) used Sputnik
- (2) used 5 H.P. Copeland Compressors

ALL TANKS GUARANTEED

WE ARE INTERESTED IN BUYING GOOD USED BULK TANKS.

itself. The ideas were as varied as the projects themselves with displays ranging from the newest ideas in bicycle safety to the fine art of cake decorating.

Although all the exhibits proved to be excellent in their construction and imaginative ideas, the first place award went to the Boots and Saddles 4-H Club which aimed their display at

horse management and care. Complete with a replica of the famous talking horse "Mr. Ed", the group explained just what steps must be taken to insure a healthy horse along with the mechanics of feeding and equipment work.

Boots and Saddles, which is comprised of 60 members is lead by Mrs. Rose Fellenbaum, Dick Allegretti, Eleanor Doutrich and Deb Heidig. The club received a cash award of \$35 for their display.

Second place and a cash

award of \$25 went to the Broken Bit 4-H Horse Club while the Lititz-Manheim Community Club captured third place honors and a cash award of \$20.

Penn Willow 4-H Club and the Mountville 4-H Club were awarded Honorable Mentions in the competition and both received cash awards of \$10.

The cash awards for the contest, were donated by the

Park City Merchants Association.

Judges for the event were Gary Martin, promotions director for Sperry New Holland and Ken Radcliff, promotions director for the Park City Merchants.

Along with the displays, the 4-Hers arranged a petting zoo and gave demonstrations on the various topics of 4-H projects and crafts.

Manheim Young Farmers Meet

Manheim Young Farmer members, wives and guests met last Friday night in the Manheim Central High School cafeteria for their annual dinner meeting. They heard from a number of speakers during the evening, and presented awards to members who has posted outstanding production records during the year.

The chapter's award for chapter service the past year went to James Kettering, who serves as Young Farmer secretary. Donald Hershey was honored with the outstanding community service award.

Melvin Martin was honored with a plaque recognizing the fact that he has just begun farming, and John Yocum, director of Penn State's experimental research farm in Landisville, was made an honorary Young Farmer. Glenn Spangler, Young Farmer advisor, also received an award of appreciation.

James Kettering won the top grain corn award for his 174 bushel per acre yield last season. Clarence Keener, Jr., was second with 173.3 bushels, and Gerald Erb captured the third place trophy with 169.5 bushels.

Top award in corn silage competition went to Luke

Brubaker for his 6.14 ton per acre yield. James Kettering's 6.10 tons was good for second place and Jay Todd, with a 5.72 ton mark, was third.

An award for having the top DHIA dairy herd in the chapter went to Elam Bollinger, whose cows last year produced an average of 17,074 pounds of milk and 648 pounds of butterfat.

FARM

CREDIT

If you're just getting started,
you'll need people who believe
in the future as much as you do.

Getting started in agriculture is no easy task. It takes know-how, land, plans and lots of money to set up an operation that's highly profitable. We know that. Your Farm Credit Service is ready and able to back young people who will devote their life and talent to the land.

The people at Farm Credit Service across the country know the land, the market, crops and livestock production in your area and believe in the future of agriculture. And there's nothing they'd rather do than sit down and share the planning of your agricultural future.

Their job is providing money and sound advice on how to use it best. They've seen just about every opportunity and problem you'll encounter. Start out with a good understanding, experienced friend who can help... your Farm Credit Service.

Farm Commentary

by Dick Wanner

Broiler Output Lowest Since '69

U.S. commercial broiler output off slightly last year. Number produced, at 2.917 billion (two billion, 917 million), compared to 2.923 (two billion, 923 million) produced in 1973. It was the second straight year output had declined. The 1974 output was the lowest since 1969.

Gross income received by producers in the 21 States that account for 97 pct. of U.S. production totaled \$2.36 billion, down 9 pct. from a year earlier — but still the second highest on record.

Despite the cutback in production,

the number of pounds produced, at 11.0 billion lbs., was up from a year earlier and the second highest on record. Reason for the gain: Birds averaged 3.8 lbs last year, up from 3.7 lbs. a year earlier and the highest on record.

Arkansas (482.4 million), Georgia (426.9 million), Alabama (398.3 million) and North Carolina (286.6 million) continued as the Nation's leading broiler producers. The four accounted for 55 pct. of national output.

Milk-Feed Price Ratio Improves

The milk-feed price ratio (pounds of feed equal in value to 1 pound of milk) improved somewhat in January, according to the current (March) issue of USDA's Dairy Situation.

At 1.25, it was up from December's

1.20 and the highest since last July. But, a check through the records shows that the 1.34 average for all of 1974 was the lowest annual average since 1955.

Cows in India Are Eating Grain

American farmers have come under a lot of pressure in recent months for feeding grain to their livestock.

But, an article in the current (March 10) issue of Foreign Agriculture magazine, hints that grain feeding of livestock has not only been common practice in parts of India, but that farmers found a way to make an extra buck by switching from feed grains to wheat during the past two years.

In his analysis of the India grain

situation, John B. Parker, Jr., of the Economic Research Service's Foreign Demand and Competition Division, points out that farmers in Punjab and other surplus producing States in India apparently fed wheat in their expanding dairy and poultry enterprises as a result of lower wheat (than feed grain) prices.

The reason: They were forbidden to transport wheat across food zone lines. So they sold their corn and sorghum (at \$160 to \$200 per ton) and retained their wheat for feed.

World Apple, Pear Output Off in '74

World production of both apples and pears down in 1974. According to USDA's Foreign Agricultural Service, apple output in the major producing countries totaled 14.7 million metric tons, down 10 pct. from a year earlier. Pear production, at 4.9 million metric tons, was off 5 pct. from a year earlier, 10 pct. below the 1970 record.

The reason in both cases: Sharply reduced crops in Europe. While the U.S. apple crop, at 2.9 million tons, was up slightly, those in France (at

1.6 million tons) and West Germany (at 1.2 million tons) were off 21 pct. and 41 pct., respectively, and the over-all European crop, at 7.5 million tons, was down 20 pct.

Italy's pear production, at 1.4 million tons, was down 9 pct. That in France (at 388,000 tons) and West Germany (at 322,000 tons) was off 20 pct and 23 pct., respectively. U.S. pear production totaled 645,000 tons, up 2 pct. from a year earlier.

Hail Loss Study Published

Hail cuts U.S. crop production more than 2 pct., costs farmers an average of \$685 million annually (in 1973 dollars), according to a USDA Economic Research Service study

issued last week. The 5-year study of 20 basic crops showed wheat, corn for grain, soybeans, cotton and tobacco accounted for the bulk of the hail crop losses.

A MUTUAL STIRRING SOCIETY

Lesson for March 16, 1975

Background Scripture: Hebrews 6 through 10.
Devotional Reading: Matthew 5:3-11.

Some time ago a wonderful friend and parishoner passed away following many years of struggle against cancer. This woman had been an inspiration to many because of her undaunted faith that conquered both sickness and death. People with lesser ills and troubles were frequently shamed and lifted by her inspiring witness.

Shortly after her passing, one of her friends confided that he wanted to attend her church so that he could find "a faith as powerful as that!" It must be said that that faith to which she witnessed was dependent upon her own unique personality, yet at the same time it was also true that that native faith was much nurtured by a Christian fellowship. The fellowship was vital to this individual.

To stir up one another This is the purpose of a church to be the kind of vital fellowship in which faith is planted and nurtured. If it is not this, no group of people, regardless of how organized and authorized, can really be a "church." If it is not a nurturing fellowship, it is not a church.

In the Epistle to the Hebrews the writer admonishes his readers to "hold fast the confession of our hope without wavering..." (10:23). Still, it is easier said than done. It is one thing to tell people to keep their faith but something else to tell them how.

Thus, the writer of Hebrews goes on to point to one source of help in maintaining their faith: "...let us consider how to stir up one another to love and good works, not neglecting to meet together, as is the habit of some, but encouraging one another..." (10:24,25).

Christians would do well to carefully consider this advice. The writer of Hebrews calls for us to "stir up" one another. Actually, the church should be a kind of "mutual-stirring society" where people are challenged and inspired to an ever-increasing level of love and service to one another. That, not perfect attendance or community acceptance, should be the great goal of our participation in a church fellowship.

What is the effect of your fellow church members upon you? What is your effect upon them? Is your church life a matter of stirring up one another to greater faith and service, or does your congregation represent something less than a "mutual-stirring society"? The ground of our confidence

One of the things we learn from our life together in a Christian fellowship is that we do not have to face life alone. For one thing, we have the support of Christian friends who can stir in us the faith we need for tough times.

But there is another reason why we do not walk alone through life: the faithfulness

NOW IS THE TIME...

Max Smith
County Agr. Agent
Telephone 394-6851

To Apply Dormant Oil Sprays

One of the best control practices for scale on many trees and shrubs is to spray them with the dormant oil spray early in the spring. The timing should be made so that the buds are swelling, but not open when the oil spray is applied. Scale is a very common insect on fruit trees, oaks, and some of the ornamental plants. Owners of these trees and shrubs should be making plans to do this spraying during late March or early April.

To Grow More Alfalfa

Many dairy and livestock producers could benefit from greater acreage of alfalfa; this is especially true with dairymen. In recent years the price of corn has taken some of the alfalfa acreage; now that corn prices are changing, no doubt alfalfa will be more attractive. Over the years alfalfa has led the forage crops in this part of the country and still deserves more attention on many dairy farms. Early spring is one of the best times to establish new stands of alfalfa. This legume yields from 4 to 6 tons of hay per acre high in protein and mineral content. Prices of alfalfa hay have been very good and the crop is in strong demand from many parts of the country.

To Fertilize Pastures

Many permanent pastures will respond to both lime and fertilizer applications. A complete soil test is the way to learn the actual needs. In a pasture mixture where we have both grasses and clover, a complete fertilizer such as 10-10-10 is suggested. On stands of straight grass (no clovers) nitrogen only is suggested. Applications made during late March or April should give earlier grazing and more forage per acre for the season. Producers should try to make every acre produce more feed and permanent pastures will respond to fertilizer.

To Shear Sheep

Warmer weather is on its way when most ewe flocks should be sheared. There is little to gain by allowing the wool to remain on the animal into the month of May and June. Late March and April would be the best time to shear the sheep and get the wool into dry, clean storage. Ewes that are nursing lambs will milk better and be better mothers without the fleece at this time of the year. Local growers may sell their wool clip to custom shearers, or take the crop to graded wool pools in either Berks or Cumberland county. These are held in mid-June. Wool to be graded should be sheared when dry, tied with the flesh side out with paper twine. Details are available at our Extension Office.

of God. As the writer of Hebrews assures us: "...he who promised is faithful" (10:23). In the Christian fellowship we share with each other both the age-old stories of God's faithfulness and the contemporary evidences of his goodness in our own lives. In this fellowship we find that the God who did not forsake Israel, who kept his promises to Jesus of Nazareth, will also be with us in the midst of life.

BERKS COUNTY DHIA MONTHLY REPORT

JANUARY 1975

Two cows in the Junge Farms Herd recorded the highest production for the month of January. Bessie produced 916 pounds of butterfat with 21,010 pounds of milk while Bella produced 883 pounds of butterfat with 22,993 pounds of milk.

The herd of Glenn B. Gockley had the highest daily average with 2.01 pounds of fat per cow per day. Second high average was recorded by the Wernersville State Hospital Herd which averaged 1.92 pounds.

The following is the Berks County DHIA Report for the month of January, 1975. Only those herds averaging 1.5 pounds per day or over are listed:

If you haven't tried Purina High Octane Hog Chow

...talk to your neighbor...he has.

You'll find his enthusiasm is contagious! This new, extra high-energy Chow with related amino acid and nutrient balance causes hog raisers who are using it to be our best salesmen.

When High Octane Hog Chow was released by Purina Research, the test results showed that it produced 9% better feed conversion and increased daily gain by 5%. It was hard to believe any ration could be that exciting. Feeders across the nation were simply asked to try it. Their results and enthusiasm are causing High Octane Hog Chow to be the most talked-about product in the industry.

You can see the difference...in fact, some feeders who agreed to a split demonstration with High Octane Complete Chow versus conventional grain and concentrate stopped the demonstration when they saw how well the hogs on High Octane looked and how much less feed they were using. They put all of their hogs on the new high-energy ration.

High Octane Hog Chow is a complete ration for growing and finishing hogs. It's a revolutionary new, extra high-energy product that can save you feed. Ask your neighbor who's feeding it...he's our best salesman.

Purina is The Leader in Both Amino Acid and Energy Level Research.

Crop Meeting Set

The Ephrata Area Adult Farmers monthly meeting will be held in the ag department of the Ephrata Senior High School on Tuesday, March 18 at 7:45 p.m. The educational topic for the evening will be Crop Pests and Pesticides for 1975. Speakers for the topic will be Harry Becker, custom spray applicator and Dick Myer of the Henry Hoover Agway Sale and Service.

Grange 66

Fulton Grange 66 met in regular form March 10, with Master Donald Trimble presiding. The Master announced the appointment of Mrs. Carole Huber to the Turkey Supper committee.

Friday, March 21, 7:30 p.m. was set as practice for the first and second degrees. All officers and other participants should attend this rehearsal. It was reported that Grange has a new supply of State Grange cookbooks.

Lecturer Mrs. Joyce Holloway started the program with a game, followed by speaker Kersey Bradley, President of the Solanco School Board, who spoke on the duties of a school board member.

The next meeting, March 24, will be first and second degrees. The next Junior Grange 343 meeting will be March 22 when State Trooper Edward Rowland will speak on bicycle safety.

The Grange will hold its annual Turkey Supper on April 5, from 4:00 to 8:00 p.m. Tickets are \$3.25 for adults and \$1.75 for children.

Build your own pre-starter ration for half the cost.

Feed Creep Wean No. 3

If you're in the business of farrowing pigs, there is only one sure way to save on feed costs — right from the start. That's why Vigortone developed Creep Wean No. 3.

This highly fortified pre-mix makes it possible for you to build your own 18% pre-starter ration for about half the cost of a commercial product.

You'll be surprised how much easier it is to get baby pigs on feed fast with this freshly ground ration and how trouble free they stay right on through weaning.

Save big on Vigortone's starter, growing and finishing rations, too.

The reasons for the superior per-

formance of Vigortone fortified corn-soy rations are simple: the pigs are assured the essential balance of amino acids and the proper levels of major minerals, trace minerals and vitamins all the way to market; and you only pay out-of-pocket for ingredients you don't grow on your own farm.

Better feed conversion means lower cost

Each Vigortone corn-soy feeding program has been designed to promote better feed conversion and lower costs. If you'd like more information, see your nearest Vigortone serviceman soon.

Learn why more pork producers are feeding Vigortone — especially now.

Deadline Approaches To Register Vehicles

Lancaster Farming, Saturday, March 15, 1975—17

With the 1975 automobile registration renewals period nearing its March 31 deadline, the last-minute applicant again threatens to

raise havoc with PennDOT's Bureau of Motor Vehicles. In December, the Bureau of Motor Vehicles mailed out some six million 1975

renewal applications for automobiles, motorcycles, suburban vehicles and tractors.

Most motorists starting sending in their applications shortly after the received them - to the point that the Bureau has had a pretty steady flow for two months and has been processing them on a same-day-as-received basis. Right now, the process is running more than 250,000 ahead of last year's pace, officials report.

But, as the deadline approaches - and the deadline is absolutely firm, they say - there are still about two million applications outstanding, and if past years are any indication, many of these will come in the last week or even the last day of the renewal period.

"Do you believe that last year there were 6,000 people jammed into our over-the-counter office in Harrisburg, stood in line for hours, and in some cases drove hundreds of miles to get here so they could do what they could have done earlier by mail," said Frank Garber, Bureau director.

Those 6,000 motorists who came to Harrisburg in person did get their registrations in time to replace their old stickers.

But many of the last-minute applicants found themselves on April 1 without the new stickers and without the use of their cars. Or, if they did try to drive their cars on the old registration, many of them faced arrest.

"If we get the application during the last week and process it in a few minutes, it is still unlikely that the mails will get it back to the motorist on time," said Garber.

"And with the early Easter this year, the mails are likely to be even slower during that last crucial week of the registration period.

"What can we say? All we can do is urge motorists to mail their applications now. They'll save themselves a

big headache and they'll allow their Bureau of Motor Vehicles to give everyone the best possible service."

Garber also emphasized that owners of vehicles which were not registered in 1974 will not receive applications for 1975.

These people and any others who haven't received applications for 1975

registration should contact the Bureau immediately, either by postcard or the Bureau's Hot Line at 717-787-3130.

Necessary information, which can be taken from an old registration for the same vehicle, should include name and address, make and year of vehicle and all numerical data on the old card.

A Harvestore Automated Feeding System Means

Now you can beat the bales! With an automated Harvestore feed processing system you can harvest alfalfa in the bud stage, when its nutrient content is highest. You can chop and windrow it one day and blow it into your Harvestore system the next - And you save more leaves, which contain some 90% of the protein. So, you may reduce or eliminate supplement costs. Add it up! No more hay bales. Less labor, less handling, less field loss, less weather risks and more feed value. It's all yours with Harvestore haylage. Why bale hay? Ask your dealer for details.

HARVESTORE Beef, Dairy and Hog Tours are being planned now!
For details, contact us today.

What's New

Precision Planting Program

A new manual from Asgrow Seed Company contains specific recommendations for precision planting of lettuce, carrots, cucumbers, celery, onions and tomatoes as well as various other specialty crops where precision planting techniques are used. Asgrow's precision planting program involves the use of a seed coating to enlarge the seed to a size where it may be mechanically planted with accuracy.

The manual is free. For a copy write: "Precision Planting Program", Department 9818-190-1, Asgrow Seed Company, Subsidiary of The Upjohn Company, Kalamazoo MI 49001.

New Starcraft Big Bale hay feeding equipment includes five different lengths of panels used in sets of four to form rectangular or square shaped hay feeders (top photo). Panels have individual feeding spaces formed by round slant bars. Shown are 6-foot panels in front and rear of this feeder, 7-foot panels on sides. Round bale feeder (lower photo) comes in 7-foot diameter

size, with or without individual feeding spaces formed by round slant bars.

A line of tip adapters for International Harvester hydraulic couplers is available from Snap-Tite. This new series, 63N8-67C8, allows hydraulic lines terminated with standard farm hydraulic tips, (F.I.E.I.), to be easily connected, without tools, to International Harvester couplers.

For complete details write: Snap-Tite, Inc., 201 Titusville Road, Union City, PA, 16438.

The new Magrath "Pigsaver" allows swine raisers to administer a high-energy liquid feed directly into the baby pig's esophagus and stomach - a positive way of providing nutrition to weak pigs that cannot compete for feed. The Pigsaver is a stainless

steel probe that attaches to any standard syringe. A home-made formula consisting of whole egg, Karo syrup and condensed milk is used. Magrath supplies the formula recipe and feeding directions with the Pigsaver. For more information, write Magrath Company, Box 148, McCook, Nebr. 69001.

Reel-Tites fence tighteners are said to work with any fence wire - high tensile or soft, smooth or barbed, new or even old rusty wire. A portable handle is attached to the Reel-Tite with a clip.

Then the Reel-Tite is placed against the fence wire. As

the handle is turned clockwise, slack is reeled up around two pegs on the Reel-Tite. When the wire reaches

the desired tension, it will catch on one of the flanges. The handle is then removed, and the Reel-Tite stays in place for the life of the fence. For more information, write: Kermco Products, Dept. C, Box 204, Monroe, Iowa 50170.

A real down-to-earth Air Planter

The new Allis-Chalmers Air Planter has a seed drop of just 5 1/2" Closer than any other on the market today. What does this do for you? Well, the shorter the drop the less chance there is for each seed to miss its target. Which also means more uniform spacing. And there's more. Choice of unit drive or common drive. Winkin Blinkin Monitoring Systems. Electric motors that give you two-for-one savings. Ask your Allis-Chalmers dealer for more down-to-earth facts.

What's New

Three new farm stand-by electric plants designed to be driven by a farm tractor PTO have been announced by Generac Corp. Capacities are 20 KW, single phase, 35 KW, single phase and 35 KW, three phase. All three units have 15 KW surge capacity to handle brief motor-starting overloads. For more information write Generac Corporation, P. O. Box 8, Waukesha, Wisconsin 53186.

Zipbond is a new one-system bonding liquid said to join most manmade

materials to themselves and to each other in just 60 seconds. No heat or pressure treatment is needed. Zipbond has a tensile shear strength of up to 2770 psi, and can be used to bond rubber, metals, plastic, porcelains, woods and glass. For more information write: M. E. Fallek, Tescom Corporation, Instrument Division, 2600 Niagara Lane North, Minneapolis, Minnesota 55441.

This new cattle headgate, called the Super Headhunter, Model 102,

features a walk-through design, said to automatically accommodate calves, cows or large bulls without any equipment changes or adjustments.

For more information contact Wadler Manufacturing Co., Box 76, R2, Galena, Kansas 66739.

Lebanon County FFA Holds Award Program

Parents and members of the Northern Lebanon High School chapter of the Future Farmers of America met recently (March 6) for the annual achievement banquet.

Shawn Hernley, chapter

president, was toastmaster for the affair held in the high school cafeteria and auditorium.

After dinner in the cafeteria, the group adjourned to the auditorium for the program, which included a hunter safety demonstration, slides of chapter activities and presentation of awards.

The hunter safety demonstration was presented by Allan Sechman, David Fortna, Chris Gettle, Dale Kiene and Gary Gelbe.

Keystone Farmer degrees were presented by Harvey Smith, area consultant, and Gerald Long, president of the Northern Lebanon Alumni Association, presented the Star Greenhand plaque. Other awards were presented by J.

Ray Bickel and G. Lamar Bollinger, advisors, and Glenn Ulrich, state vice president.

Remarks were offered by Ulrich, state vice president for the eastern region, who is a son of Mr. and Mrs. Richard Ulrich, Ono, and by Clarence Krammes, high school principal.

Slides of chapter activities for the year were shown by Shawn Hernley and Richard Kreitzer. Special guests were introduced by Richard Kreitzer.

Officers of the chapter are: Shawn Hernley, president; Richard Kreitzer, vice president; Dennis Wenger, secretary; Arthur Sweinhart, assistant secretary; David Flory, treasurer; Frances Bragg, assistant treasurer.

Daniel Bausher, sentinel; Steve Fox, assistant sentinel; Edward Sutherly, reporter; Larry Gross, Daily News reporter; Edward Bachman, assistant reporter; Chester Michael, chaplain; Alan Snyder, assistant chaplain; Joe Wood, parliamentarian.

Chicken Cooking Contest Scheduled

The 1975 Delmarva Chicken Cooking Contest will take place June 14 in Easton, Maryland, as part of the 28th Delmarva Chicken Festival. The contest is a preliminary cook-off for the National Chicken Cooking Contest and is open to residents of Delaware, Maryland and Virginia.

Ten contestants from each state will be selected to compete in Easton. Regional prizes include cash awards in amounts of \$300, \$200 and \$100, and gifts of merchandise. First place winners from each state will compete in the national finals where \$10,000 will be awarded the grand champion. Two years ago a Wilmington, Del., man was grand prize winner.

Anyone 18 years of age or older is eligible to participate. Deadline for entering is April 1. Entries must include chicken—whole or in parts—, at least one teaspoon of Accent flavor

enhancer and one-fourth cup Mazola corn oil. Recipes will be judged for ease of preparation, interest, availability of ingredients, visual appeal and flavor.

Additional information and entry blanks are available from the Delmarva Poultry Industry, Inc., Rt. 2, Box 47, Georgetown, Delaware. They are also available from your county home economics extension agent.

Swine Dysentery Booklet Published

"A wide variety of drugs have been used in the treatment of swine dysentery with various results. The strange thing about treating the disease is that the perfect drug may give imperfect results... The symptoms may recur, necessitating a reevaluation and probably a change in drug treatment."

So states William N.

Chandler, D.V.M., in a brochure entitled, "Swine Dysentery," published by Commercial Solvents Corporation's Animal Health and Nutrition Division, Terre Haute, Indiana.

Dr. Chandler indicates that even under the best management and precautions, outbreaks of swine dysentery have occurred. If the disease

becomes established on a farm, antibiotics in the form of parenteral, drinking water, and feed medications become necessary for control.

Swine dysentery is a common, contagious, infectious disease characterized by inflammation of the large intestine, and its cause has not been fully determined.

"Financial losses result from decreased rate of gain, pig deaths, the overall expense of drug treatment, and added labor costs. Mortality is usually low except when the animal fails to respond to treatment. In most cases, the morbidity is high, especially in confined facilities."

Dr. Chandler includes a

Clean Lampshades

Add longer life and added beauty to your lampshades by cleaning them regularly. And a clean shade lasts longer, helps give better light, and adds to the appearance of the lamp, points out Mrs. Helen Puskar, Extension home furnishings specialist at The Pennsylvania State University.

You can clean some shades by dusting with a soft brush or the dusting brush on your vacuum cleaner. When dusting, gently move the brush up and down the shade. You may want to clean the shade if dusting reveals soil and grime. Check the fabric and construction before going ahead with any cleaning process.

See if washable shades are sewn to the frame and not glued. Be sure the frame is rustproof. Use a solution of lukewarm water and mild detergent to wash a lampshade. Wash it in a container large enough for the whole shade such as a laundry tub. Dip the shade up and down in the solution until it's clean. Rinse in clear water by dipping. Dry as rapidly as possible avoiding direct sunlight. An electric fan will speed up drying.

For lampshades covered with delicate fabrics, drycleaning is best, recommends Mrs. Puskar. But have your drycleaner check the fabric to see if it's drycleanable.

If you have shades that are glued, clean them carefully. You can wash plastic shades, but check a small area before doing the entire shade. For parchment or paper shades use wallpaper cleaner.

Add lampshade cleaning and dusting to your housekeeping duties and avoid costly replacement.

brief history of research on swine dysentery, the results of which show that it may not be simply one disease but several which manifest themselves in a similar manner, but are of varied etiology.

According to Dr. Chandler, the course of the disease may vary from peracute to chronic. Morbidity varies also but usually reaches 80-90 percent, and up to 30 percent mortality.

Dr. Chandler received his D.V.M. degree from Auburn University. After spending one year with the Illinois State Livestock Industry as a district veterinarian, he served for two years as veterinarian for Peoria County, Illinois. He practiced privately in Minier, Illinois for fourteen years where he was also district veterinarian for ARS USDA. He joined Commercial Solvents Corporation in August, 1967.

Copies of the new brochure are available by writing for "Swine Dysentery," to the Animal Health and Nutrition Division, Commercial Solvents Corporation, Terre Haute, Indiana 47808.

Pure and simple

HESSTON
PT-10 WINDROWER

From sickle to full-width conditioner without touching the ground in between. That's the direct feed Hesston PT-10 windrower. What this means to you is cleaner hay, more uniform conditioning, fewer moving parts and greater capacity per foot of cutterbar. You also get the conditioning action that saves the leaves and makes Hesstonized hay possible. And the conditioner rolls adjust to give you more aggressive action in native hay or grasses where leaves are not easily separated. For windrowing at its pure and simple best, see us about the Hesston PT-10.

ED ESHLEMAN'S WASHINGTON REPORT

It has become apparent, as our economy has faltered, that one of the real problem areas is the increased costs caused by government. This is not just the problem of big

government spending, serious as that is but also the impact of Federal programs and regulations on the private sector of the economy.

The price of the automobile has risen dramatically because of Federal pollution control and safety requirements. The increased car costs are, at least, partially responsible for the downturn in automobile sales.

Highways, power plants, public buildings and many more projects cost more because of Federal environmental mandates. Nearly all consumer items - meat, poultry, fabrics, land, boats, paint, and credit, to name a few - are higher priced because of government regulations passed within the last ten years.

The increased cost of everything has made us take a look at where prices are being pushed upward. Political liberals have been shocked to find something that moderates and conservatives have been saying for years; that nearly every new program government undertakes is expensive not only in terms of the tax

money it uses, but also in terms of its effect on the whole economy. Therefore, some liberals are beginning to say that maybe the economic impact of programs should be considered before they are rushed into law. As someone who has been concerned about this problem for a long time, I could not agree more.

When the liberal Washington Post came out editorially the other day in favor of economic impact statements prior to legislating, I was surprised, probably even shocked. The Post said, "This is not to suggest that things like health insurance or safety regulations or meat inspection programs should be postponed or abandoned. Rather, it is to suggest that Congress and the public should be aware of the full

costs of the legislation it approves - and of the individuals or institutions that will be made to bear those costs."

In other words, it is high time that Congress does more than simply give in to every pressure group that comes along with an expensive new program. Attached to the bill that proposes that program should be a complete statement of what it is going to cost and who is going to pay the bill.

If the American people are aware in advance of the total expense that the Nation will be footing, there will be a good deal less enthusiasm for many legislative ideas. But it is only fair that they be given that information,

because we are seeing right over and over again, and the now that they pay the bill bill is very expensive.

Pullet Producers Meet

Plain and Fancy Egg Ranch, Elizabethtown, R3, its pullet growers and producers met on Monday, March 10 at the General Sutter Inn, Lititz.

Guest for the evening was Dr. John V. Shutze, Head of the Extension Poultry Science Department at the University of Georgia, College of Agriculture in Athens, Ga.

Dr. Shutze spoke and showed slides on nutritional requirements, manufacturing, quality control, handling and feed quality on the farm. A round-table discussion followed.

PEOPLE BOOM

At the time of Christ the world's population was between 200 and 300 million. About 9 million lived in Egypt, 54 million throughout the Roman Empire and 60 million in China. A thousand years later there were not many more people on earth than there are in the United States today—about 275 million. In 1900 the world's population was only 1.6 billion, less than half what it is today.

The United States' share of world energy consumption is on the decline. In 1950, the U.S. consumed 44.5 percent of the world's energy. In 1970, it used 31.4 percent.

Lids for Canning

Renewed interest in home canning has created consumer demand for canning jars and lids that may exceed production capabilities. Consumers who are planning for the upcoming canning season by buying canning supplies now are reminded that the two-piece metal lid is the kind recommended for home canning.

Louise Hamilton, foods and nutrition specialist, and Dr. Gerald Kuhn, food technologist, both with the Cooperative Extension Service of The Pennsylvania State University, point out that the two-piece, self-sealing lid, is the one that offers the greatest assurance of safety in home canned foods. The flat metal lid with a sealing compound around the edge is held in place by a metal screw band. This seals at the top edge of the jar. To use, wipe the jar rim clean after packing the food. Put lid on, with sealing compound next to glass. Screw

the metal down tightly by hand and process following up-to-date processing procedures. The Extension specialists explain that even when the band is tight, this lid allows air to escape from the jar during processing. This is what makes it a self-sealing lid.

The screw bands are generally removed after the jars have cooled for one day. Screw bands in good condition can be reused. But the metal lids with the sealing compound can be used only once. The Extension specialists caution consumers to examine new metal lids carefully before using. Check to make sure there are no gaps in the sealing compound around the edge.

Jars should be of a standard style — those used for the last several decades in home canning — with the manufacturer's name on the jars. The Extension specialists do not recommend glass mayonnaise, pickle and coffee jars because the sealing edges may not be uniform and may not seal properly. Also, these jars may not withstand the temperatures of the pressure canner. Check all jars for cracks and chips. Use only those that are made especially for canning and are free of imperfections.

Farm Women Events

Farm Women Society 10 held a meeting recently at the Holiday Inn with Miss Frances LeFevre and Mrs. Mary Stewart as hostesses.

Mrs. Jay Habecker chaired the meeting with devotions being conducted by Mrs. Clarence Reinhold.

An invitation was extended to the Society to attend a meeting on Monday, March 31 from 9:00 a.m.-3:30 p.m. at the Willow Street Vo-tech school. The cost will be \$10 and will include the noon meal. Current problems will be considered.

A donation will be given to Easter Seals Society.

Mrs. Mabel Murray gave a very interesting cook review on "All Creatures Great and Small." A monthly auction was held.

New Idea's NEW "Hay Thing"

Makes hay that cattle like better

Introducing New Idea's advanced 7-foot Cut/ditioner—a field-proven machine that makes quality hay in rank, heavy first cutting, or thinner later cuttings. It cuts cleanly and conditions gently. Makes soft, palatable hay with rich, protein-filled leaves and tender tops that cattle prefer. Won't plug—even in long, rank and down hay.

This new "Hay Thing" can also be used as a tedder or to turn windrows. And it does a lot of other jobs, such as clipping, cutting and shredding.

All this, plus low first cost and trouble-free operation. New Idea's advanced Cut/ditioner — the new "Hay Thing."

We make your job a little easier.

(Continued from Page 1)
"But I sure don't regret having them. Even with no-till, I think you could get some washing and gullies. I don't have any problem at all."

The terraces on Groff's farm were laid out in 1968 by employees of the Lancaster County Soil Conservation Service, and installed by Frank Burkhardt, a conservation contractor from Lancaster. The waterways were installed in 1969. The diversion terraces were put in the following year, after the waterways were covered with sod.

The terraces are designed to slow the flow of water from the fields. They are actually mounds of earth which operate somewhat like the spouting around a house roof. When it's raining, water flows downhill until it comes to the bottom of a terrace. If enough water collects at the bottom of a terrace, it will flow slowly to one of the grass waterways. The terraces are designed so that the water moves so

slowly it cannot carry soil particles with it. Soil collects on the uphill side of the terraces, and can be moved back uphill if necessary as the fields are plowed. When water runs from Groff's waterways into the stream that runs through his farm, it's clear water.

Groff said his corn crop was off during the years he was establishing terraces, but figures it was worth the price in reduced yields. "I may have lost the equivalent of an acre of crop a year for about two years," he pointed out. "At first, there's not much topsoil at the bottom of the terraces. The bulldozer has to scrape clear down to the subsoil at some spots. The corn there the first few years looked pretty sick - it was yellow and some of it didn't get any ears. But now, you can't tell the difference between the corn at the bottom of the terraces and the top. The corn at the bottom might even be a little better."

The relatively minor loss of corn was a small price to pay for the added benefit of the terraces, Groff feels. And he figures that the dollars he invested were well-spent, too. "The whole project cost about \$5000, but I didn't have

to pay the whole thing. ASCS put up about 80 percent of the money. I don't know if I'd have had the work done if I'd have had to pay the entire cost."

ASCS is the Agricultural Stabilization and Conservation Service, a federal agency which is part of the U.S. Department of Agriculture. ASCS personnel administer the programs which channel funds to farmers, mainly for crop subsidies and land improvement.

On his corn ground, Groff aims for a 24,000 plant population, and figures he's getting 25 tons of silage to the acre. Just before planting, he chops the rye crop, puts it in upright concrete silo and feeds it to his heifers and young stock. He tries to keep the mature cows on silage the year around. He produces most of his own roughage, but buys his grain.

At planting time, the corn goes in with banded insecticide and fertilizer. And before it comes up, he goes over the fields with herbicides, nitrogen and Paraquat. After the corn comes off in the fall, he discs the stubble several times before planting the rye. "I have somebody come in to plant my corn," Groff said, "because I don't have a no-till planter. The first year he was here, it was pretty rough planting. But the soil seems to be getting better and better every year, and this year we didn't have any trouble at all in planting. And I haven't plowed since I went to no-till corn."

Not only does he not own a no-till planter, Groff also uses custom operators to fill his silo and bale his hay. "I've always figured that with my limited acreage, it just doesn't make sense to put a lot of money into machinery."

One important factor in the improvement of his soil, Groff feels is the fact that he drives over the ground very few times with heavy machinery. The exception would be the heavy forage wagons when the silo is being filled in the fall. He doesn't even drive over the fields to spread manure.

When Groff built his present comfort stall barn in 1970, he installed a manure pit big enough to hold the output from both the cows and the milk house for about a month. He already has some 3500-feet of irrigation pipe which he had used from

time to time during dry spells, and figured that he could use that pipe to get the manure from his pits out onto the fields. In order to do that, he needed a special kind of pump, which he bought from Oregon, and which has been giving him good service.

Was it expensive to set up a system for irrigating with manure? "I already had the irrigation pipe, so all I really needed was the pump," Groff said. "If I hadn't bought that pump, I'd have had to buy a pump anyway to get it out of the pit, plus a

Arcadian Liquid.

Prime way to top-dress.

Small grains and grass need plenty of nitrogen to grow big, protein-rich yields. That's why leading farmers top-dress with Arcadian Golden URAN® liquid nitrogen. It supplies both quick-acting and long-lasting nitrogen, fast and easy.

Uran can be sprayed or dribbled on in early fall, in winter on frozen ground, in early spring, and throughout the year on grass. It's ideal for airplane and irrigation application.

Uran saves you time and labor. No bags to lift. No augers to line up. One man using a truck mounted tank with a wide spray boom top-dressed over 200 acres in a day. And you can add crop protection chemicals and other plant foods to do more jobs at less cost.

Uran soaks quickly into the soil. Covers every square inch equally for consistent yields and even maturing.

We can custom top-dress Arcadian liquid URAN or rent you an applicator. Either way, you'll get the prime nitrogen top-dressing. Order early.

See us now.

Conservation Banquet is Held

"We've got to accept the fact that we are soon going to have land use planning legislation," Pennsylvania's State Conservationist Benny Martin told some 200 people attending the annual meeting of the Lancaster County Conservation District on Thursday night. "But to make it work, we've got to see that we get local citizen involvement in the planning. Citizen involvement is the only way we can be sure that land use laws will serve agriculture, open space and planned orderly development."

Martin also said that Americans must be careful not to over react to overwhelming environmental

challenges. "We won't be able to solve all our problems overnight," he noted. "We've got to think of the costs of solving environmental problems. We've got to guard against environmental plans that benefit only a few of our citizens. And we've got to make sure that the restrictions we place on ourselves are worth the environmental returns."

On the subject of soil conservation, Martin said that Pennsylvania has traditionally been a leader. He pointed out, though, that an all-out effort to produce food this coming year will put a strain on farmland, and that only with very careful

management can the state's farmers avoid tremendous soil losses from their fields. Some 250,000 more acres are expected to be planted in the state this year, and most of that acreage is sloping or otherwise less than ideal for agriculture.

Martin said it should be possible to meet the challenge of feeding the world while at the same time maintaining sound conservation programs "If we concentrate only on production, with no thought given to protecting the land," Martin said, we'll wreck the tremendous strides we've made in conservation in the last 30 years."

Also addressing the group were County Commissioners Paul Paes and Jean Mowery. Both praised the work of the Conservation District, and

commented on the need to preserve the unique character of Lancaster County.

Henry Hackman, executive assistant for the district, reported on his duties and activities for the year, and Nancy Burkhart, secretary-treasurer, read the annual report.

Commissioner Paes presented awards on behalf of the district to a number of people attending the banquet. John B. Groff, Mount Joy R1, was recognized as the district's outstanding cooperator of the year, and was presented with an aerial photograph of his farm by Paes. The photo was taken by Grant Heilman, Lititz, one of the country's premiere agricultural photographers.

Robert Brubaker, a district board member who resigned to move to Minnesota, received an award to recognize his contributions to the district while on the board. Robert K. Rohrer, Quarryville, was honored for his work as a conservation contractor, and Robert Herr, Narvon R2, winner of the Pennsylvania Outstanding Conservation Educator award for 1974, was recognized by the district for his work in conservation.

Groff (Continued from Page 26)

barn cleaner plus a spreader. Actually, I figure this way I saved money."

In the barn, manure falls into gutters at the ends of the stalls. These gutters are two-and-a-half feet deep at one end and slope towards the pit. Where they enter the pit, the bottoms of the gutters are five feet below the grates. Once a week, Groff flushes these gutters out with water from a pond below the barn. This job takes about ten minutes. "At first, I was concerned about flushing the gutters just once a week. So were the milk inspectors. But we don't have any problems with odors or anything else, so I'll just keep flushing them out once a week."

Besides the manure, all the waste water from the milk house goes into the pit. Once a month, Groff hooks his irrigation system to the manure pit and sprays the manure onto the fields. It generally takes about four hours of pumping to empty the pit. generally takes about four hours of pumping to empty the pit.

Groff uses a nozzle type sprayer. When he's pumping manure, he adds water from the pond, and figures the mixture that goes through the nozzle is about half manure and half water. He leaves the sprayer in one spot for about an hour, then moves it. In this way, he generally gets over the entire farm in a year's time. During the winter, Groff sprays all his cropland with the manure. In the growing season, though, he sprays only on two acres. These two acres are covered with rye stubble, the aftermath of the rye he allows to mature into seed every year.

The Groff farm is not only logically planned and smoothly run, it is also a very picturesque farm and a pleasant home for Groff, his wife Marian and their five daughters. Another Groff had yet to see the farm when Lancaster Farming visited there on Monday. He was the Groff's first son, born early Monday morning

How To Grow Heifers Fast!

Wayne Calf Krunch builds smooth, growthy heifers . . . fast! Young calves love its sweet, grainy texture and molasses-covered vitamin pellets, laced with milk products. It's so tempting they eat earlier, grow faster, mature and freshen sooner, adding *months* to their productive lives. When heifers freshen at two years or earlier, you *know* it works. In tests between Wayne Calf Krunch and a typical herd milking ration for starting heifer calves, the Wayne-fed calves *gained 15% more weight on 90% less starter feed!* Try it, and see. Feed for the difference innovations make. Feed Wayne.

Many Attend 4-H Family Night

Four hundred fifty York County 4-H Members and Parents assembled for the Family Fun night sparked off by a covered dish supper. Following supper there was entertainment for all with a choice of square dancing, bingo or relay games for the young children.

Family Fun Night, an activity planned by the York County 4-H Council to provide good family entertainment helped to close out 4-H Kick-Off Week with a high kicking time. The evening was started off with a covered dish supper which with 8 serving lines moved quite smoothly. By the time the meal was over everyone was full as a small amount of food was left in the bottom of the dishes. With everyone's cooperation, the 4-H Center auditorium floor was cleared and entertainment began. It was a choice of Square

Dancing called by Fred Hutschenreuter, Delta, R2, who had everyone kicking up their heels, bingo with surprises for many, or relay games for some of the younger participants.

As a real closing for 4-H Kick-Off week, a promotional poster contest was held with all posters hung up for decoration. Everyone voted for their favorites of 48 posters and the top five were picked out as winners. The most popular posters were "4-H Moves" created by Teri Lehigh, East Berlin R2; "4-H Is A Beautiful Experience" by Jackie Flaherty, Delta R2; "4-H Gets It On" by Sue Schneider, Wellsville R1; "Don't Be A Castaway! Join 4-H" by Jeff Roth, Spring Grove R1, and "Roll Ahead With 4-H" by Bonnie Wire, Spring Grove, R3.

Rail Users Are Urged to Testify

Agribusiness firms responding to earlier rail surveys by PennAg Industries Association and whose businesses may be excluded from the proposed ConRail system developed by the United States Railway Association were advised by PennAg executive vice-president Donald Parke to check and challenge facts which might be misleading as reported in the Preliminary System Plan, recently released by USRA.

Hearings will be held in Harrisburg and Pittsburgh March 17 through March 20. In Scranton and Erie, they will be held March 24 through the 26th. In Allentown and Altoona, March 21.

LAND USE

Housing the U.S. population takes up about 35 million acres. That amounts to less than 2 percent of the nation's total land area. Feeding and clothing the population requires at least thirty times more land.

Hearings will be conducted by the Rail Service Planning Office (RSPO) within the Interstate Commerce Commission. In a statement D. Jay Wolgemuth, Treasurer of Wolgemuth Bros., in Mt. Joy and Chairman of the PennAg's Transportation Committee, said, "Only by speaking now can both the need for adequate rail service and the methodology used to determine profitability be questioned. Both the agricultural community and the public at large have a vital interest in what decisions are made to restructure ailing Northeast railroads."

Know Where the Activities Will Be? Read the Farm Women Calendar.

110 LEVEL-ACTION™ DISK

Ideal workmate for 60 to 100 hp tractors

Chop light trash, incorporate chemicals, or make seedbeds with weight-per-blade of 55 to 75 pounds. Cutting widths range from 11 feet 4 inches to 14 feet 3 inches with 7¼- or 9-inch blade spacing. Overlapping front gangs cut away the hard center ridge old-style disks leave behind. Offset rear gangs pull in the same amount of soil front gangs move out—and feather soil together for smooth flow. An exclusive self-leveling hitch keeps the frame level and keeps 100 percent working weight on every blade. You can see the results—a level surface, level disk floor, and uniform mixing in between. See us for full data.

FREE!

1/2 year of fuel for your DEUTZ

(SAY DOY12)

THIS MONTH ONLY

Buy any of eight models of new Deutz air-cooled diesel tractors and get direct from Deutz Corporation a check equal to the estimated cost of fuel needed for 1/2 year of average farm work—up to \$372.40 depending on model*

Deutz can make this sensational offer because the Deutz air-cooled diesel engine uses so much less fuel than competitive models

Buy now and get this big fuel savings immediately and still more in the years to come

We have all the details. Come and cash in on this terrific offer—good only the month of March, and subject to availability

*Based on rated gallons per hour for average farm work and diesel fuel at 38¢ per gallon

Eshelman

(Continued From Page 1)

bill last year, and will probably vote against a similar bill introduced this year. Walker added, though, that he expects this year's bill to get a much more sympathetic hearing by the Congress.

Donald Hershey, president of the Lancaster County Farmers Association, a PFA affiliate, told Walker that the organization favored an economic formula for milk pricing to replace the present system. Federal order prices for milk are currently determined by the Minnesota-Wisconsin series which depends on the price of butter.

Hershey explained that in order to raise milk prices now, the U.S. Department of Agriculture must first hold public hearings, and even if an increase is allowed, it is always several months before the increase can be made effective. PFA's proposed economic formula would take into account four main factors: the ability and willingness of the consumer to buy; the cost of producing milk; alternative opportunities for the farmer to

invest his capital and labor; prices of butter, non-fat dry milk and cheese. Under the proposal, prices would be adjusted up or down on a quarterly basis, rather than annually as they are now.

Yost also told Walker that the group would like the Congressman's support in backing a recommendation made Monday by Secretary of the Treasury William Simon. Simon recommended to President Ford that the U.S. impose countervailing duties on cheese imported into this country from European Economic Community countries. Yost pointed out that some EEC countries subsidize the production of cheese, which means it can be sold here at a price which tends to hold down the price of American made cheese and milk. A countervailing duty would add a tariff equal to the amount of the EEC subsidy,

and therefore bring the price of foreign cheese more in line with domestic product. Yost suggested that the Congressman write to President Ford urging him to approve the imposition of countervailing duties, and Walker replied that he thought Eshelman would support the dairy farmers.

Other delegations of Pennsylvania farmers visited throughout the day with the Congressmen from their districts as well as Senators Scott and Schweiker. Both Senators and most of the House members from the Keystone state were at PFA's legislative banquet on Wednesday evening.

Senator Scott said the Senate was considering a bill to increase the rail subsidy plan from its present two years to eight years. He said this plan would help farmers because it would guarantee rail transportation for their farm products as well as

their produce. Senator Schweiker took the podium after his senior colleague, and wholeheartedly endorsed every one of the PFA ob-

jectives. "I like the milk pricing scheme, and the countervailing duty on cheese imports," he said. "I think your estate tax

proposal is right on target, too. Our present inheritance tax laws are squeezing the family farm right out of existence."

Fight POLLUTION Now...

USE SAFE, ECONOMICAL

Growers Fertilizer Solution!

Applied directly to the seed at planting time and on leaves as foliage spray—more than 90% of Growers 10-20-10 Fertilizer Solution may be used by the crop during a growing season. No other fertilizers needed! Eliminates costly waste, nitrate poisoning, and dangerous pollution run off! 15 years on the farm use has proven it safe, efficient, convenient, and economical! And we install bulk tanks and truck deliver direct to your farm.

25th Year Open House At Stauffer Diesel, Inc.

Some 300 people attended a 25th anniversary open house celebration at Stauffer Diesel in New Holland last Wednesday and Thursday. On Thursday, Daniel K. Blank, Leola RI, was honored with a special gift for being the firm's very first diesel customer a quarter century ago.

According to Stauffer officials, the guests consumed 70 pounds of hot dogs on Thursday, as well as quantities of buns, cookies, chips and sodas. Films of the company's Hesston, Deutz and Papec equipment lines were shown, and door prizes were awarded.

Sutan[®] Selective Herbicide + and atrazine... my "go-fishin' herbicide"

When I get my corn planted, I'm set for a little fishing. Before other farm jobs. With no cultivating or spraying a catch-up herbicide.

That's because I incorporate a tank mix combination of Sutan[®] herbicide and atrazine in the soil when I disc my corn ground for planting. Sutan⁺ takes care of the grass weeds. Atrazine gets the broadleaves.

Mixed in the soil, this combination works. Rain or shine. Sutan⁺ and atrazine are right in the soil destroying weeds as they sprout. No waiting for rain as with surface-applied herbicides. It's always dependable!

Sutan⁺ is designed to give excellent crop

tolerance on a wide range of soil types under all variations of weather stress and application errors.

Sutan⁺ with atrazine has a top reputation for reliable broad-spectrum weed control in corn. No wonder I call it my "go-fishin' herbicide" combination.

Use it on your corn ground, too. Check dosage rates on the product container. Always follow label directions carefully. See your Stauffer supplier for Sutan⁺. Stauffer Chemical Company, Agricultural Chemical Division, Westport, Connecticut 06880.

Sutan[®] + from

Mrs. Barbara Bomberger

A Creative Egg Decorating Artist

by
Mrs.
Charles
McSparran
Farm Feature
Writer

With the first day of spring only five days away and Easter just two weeks away women everywhere are thinking about decorating, their spring wardrobes, beautiful flowers, gardens and the various activities that go along with this season of the year. Truly there is no season that restores the hope of everyone as does spring. For Christians, Easter with its annual observance of the resurrection of Jesus, is the basis of their faith. The egg has been the symbol of Easter and new life for time immemorial. Some ladies might like to try their skills at the ever popular art of decorating eggs for Easter this year. There are many methods used.

Mrs. Barbara Bomberger, 60 S. Main Street, Manheim, has become well known for her ability to decorate eggs because she uses some very old methods and creates very beautiful, unusual and interesting ones. She loves to show people how to decorate them and thousands of people have watched her at the Kutztown Folk Festival where she has demonstrated dyeing and decorating eggs for nine years. Her granddaughter, Sally Bomberger, has been her co-worker there the past couple years. They also make cornhusk distelfinks (birds) and place an egg in them. This festival is held for eight days, including the Saturday before and after July fourth each year. This year it will be held June 28 through July 5. This event has been going on for 25 years. It was through Mrs. Bomberger's teaching Mrs. Mark Eaby to decorate eggs by the Fabrege method that Mrs. Eaby's husband, who manages this folk festival, invited her to participate. She also demonstrates egg decorating, mainly the scratch method, at Gimbels' Pennsylvania Excitement Days in their downtown store in Philadelphia the second week of May.

Although Mrs. Bomberger took a course at the Iris Club eleven or twelve years ago in decorating eggs by the decoupage method perhaps she inherited the talent and the patience to excel in this art. Her great-great-grandmother, Maria Brubaker, decorated them by the

Mrs. Barbara Bomberger, Manheim, her knife in hand is scratch-carving an Easter egg. She decorated all the interesting scratch-carved an-

tiqued, decoupage and Fabrege eggs on the table, many of which are operative.

scratch-carving method and one of hers, dated 1774 with her initials M.B. and a beautiful rose and heart on it, has been displayed at the Kutztown Folk Festival. It is the oldest one of this type on record at this time. Mrs. Bomberger also has a scratch-carved egg done by her grandmother in 1889.

Mrs. Bomberger says she would never be able to count the eggs she has decorated. She has given a lot away, has many around their home, particularly in their large front window at this Easter season, and sold some she made while demonstrating at Kutztown.

She uses principally goose, duck, bantam and pigeon eggs in her decorating, and uses the bantam eggs to make necklaces and pigeon eggs to make matching earrings. She has made at least a dozen necklaces and earring sets. Besides being attractive they look very old because of her method of dyeing and finishing. Mrs. Bomberger has a reserve of several goose eggs from her two geese which she kept in her back yard and keeps the one surviving goose at her niece's farm.

Mrs. Bomberger employs methods of dyeing the eggs used by her ancestors by boiling various things at hand: yellow is produced from onion peel briefly steeped, which is the oldest method of dyeing, saffron or celery leaves; red from beet juice; brown from onion skins steeped to desired brown, tea or coffee; green from early grass clippings or spinach; black from alder or walnut bark; and blue from blueberries. Straining the dye before boiling the eggs produces plain colors. Various shades of brown can be formed by laying eggs among the onion skins. The same way, an interesting blue can be produced by mashing the blueberries and boiling the eggs with them. The result is various shades of blue, light blue where the seeds and skin touched the egg. Use white eggs. The eggs must be clean and free from any trace of grease to take the dye properly. Hard boiled eggs are easiest to dye. Boil them gently for a half hour. This makes the yolk and white so hard that they do not spoil and the eggs can be kept whole indefinitely. Mrs. Bomberger has eggs that are many years old and rattle when shaken.

To achieve various designs and colors gather small leaves or weeds, wash and while wet lay on egg to form design. Cover with onion skins, leaving small bare spaces. Roll in cloth or a piece of nylon stocking, twist ends to secure firmly then place eggs in red or blue dye. The egg will be brown where onion skin touches and white outline of leaves or weeds placed under onion skins. The uncovered part of egg will be red or blue according to dye used. Also interesting colors can be achieved by wrapping eggs in colored materials such as calico, which are not dye set materials, and boiling gently for 20 to 30 minutes.

To produce a German variation of leaf decorated eggs, wash leaves, flowers or grasses and dry them. Dip in a small amount of salad oil or beaten egg white. Arrange them on egg to form a design. Wrap in nylon stocking, tie end close to egg to secure leaves. The nylon stocking gives a slight textured appearance to the egg. Dip the egg in the dyes until desired shade is produced. Remove the wrapping and leaves when cool.

Mrs. Bomberger uses a zacto knife, razor blade, sharp needle or other pointed instrument to scratch through the dye to the natural color of the eggshell to create designs such as rose and heart, animals or birds. She found an easy way to finish and seal scratch-carved eggs is to rub them in her hands with a small amount of varnish.

The method she uses to remove contents of an egg for decorating is to clean it a room temperature. Then she makes a hole in the ends of the egg with a sharp needle or ice pick, about one quarter inch in diameter. Break the yolk with a long needle or cake tester. Shake hard, to break the yolk and white. Use a syringe to blow air in the

Homestead Notes

hold to force out contents. Wash out egg and set to dry before using.

Blown eggs can be decorated in many ways and hung on an Easter tree, to make jewelry cases or mounted in a base which you can make from many household items such as curtain rings, buttons, egg cups and perfume bottle tops or can be purchased now at craft shops. Rubber bands are easy to use to mark eggs in half length wise for jewelry boxes. Use a number three pencil to mark egg, also to section off egg in equal parts. The egg can be cut with a jewelry hand saw or electric bench tool. Laces, narrow ribbons or braids, sequins and pearls are used around openings. Small ornaments can be purchased in craft shops or figures cut out of cards to make interesting insets.

Mrs. Bomberger uses the Fabrege method of decorating in some cases. They are cut out and decorated with jewels. The name comes from Peter Carl Fabrege who made this type of decorated tin eggs for the Czar of Russia to present to his wife each Easter from around 1880 to the early nineteen hundreds. Mrs. Bomberger used hinges,

[Continued on Page 44]

Mrs. Bomberger, holding an egg which she dyed blue with blueberries, shows some of her beautiful dishes she keeps in her old corner cupboard which was saved from her parents burning home when she was less than five years old.

Bicentennial Costumes

Although the actual bicentennial celebration of our country will not take place for another year, many people have asked us where they can find patterns for the colonial costumes.

Fortunately, the pattern companies have been a great help as many of them have already designed and are offering patterns for the costumes with costs beginning at \$1.00.

Many of the designs are for adults as well as children and even offer patterns for the period collars and accessories.

For more information or to view the actual patterns, consult the pattern books at your fashion or sewing center or department store.

Federal Market Orders For Fruits and Vegetables

Many people realize that there are market orders for milk, yet few realize that there are also specific market orders for fruits and vegetables. In fact there are 48 market orders which provides for fresh produce in every area of our country.

Market orders are designed to cope with crops grown in a specific area and to deal with the marketing of the produce in regional areas.

Market orders usually contain some information of minimum quality requirements backed by Federal Inspection so that the poorer quality crops are held from the market.

Marketing orders also help in keeping the supply of a commodity at levels that are best for consumers. By allotment, crops are kept from being marketed in surplus at any one time. This helps to reduce any sharp fluctuation in price.

For more information on the subject write to the Information Division of the Agricultural Marketing Service, USDA, Washington, D. C. 20250

(Continued from Page 42)

wires and metallic string to make a lot of the eggs operative.

For the decoupage method she cuts out embossed metallic wrapping paper designs and puts them on the eggs then antiques them. It is very thin and applies easier than cut-outs from greeting cards. If greeting cards are used they should be peeled to the thickness of wrapping paper. Seal face of card with decoupage sealer. Dry for 12 hours then soak in warm water. Lay print on paper towel, face down. Rub off back gently with finger or fine sand paper until of desired thickness.

Mrs. Bomberger says that cutting the picture is very important to achieve the proper effect so it will look like a painting. Use curved decoupage scissors held with the thumb or third finger. Open and close the scissors, feeding

the print into the blades, making a continuous cut. The secret to good cutting is learning to maneuver the paper up and down, around and around, to the contours of the line of the picture. She also uses the tole paper cutting method which is done in three dimensions.

Apply white glue to cover the cut-out completely, apply to egg and smooth down. Use a round tooth pick and roll print from center to edge, to roll out excess glue and bubbles. Remove excess glue from egg with damp cloth or sponge. Dry over night. The next step is to varnish it. Do so by dipping the brush halfway into the varnish and flow on egg evenly. Apply about four coats or enough to bury the print. You can apply two or three coats a day but be sure varnish isn't tacky before putting on another coat. Dry 48 hours before sanding. Use fine steel wool and buff until you get a dull finish.

Barbara, the daughter of the late Mr. and Mrs. Sam Brubaker, was born and raised till five years of age on her parents large general farm near Mount Joy, in Rapho Township, Lancaster County. Their house burned which she can well remember. One prized item saved from the burning house was a lovely corner cupboard which she has in her dining room today. The Brubakers moved to Lancaster and Barbara attended Stevens Girls' High School. She graduated from Lancaster General Hospital School of Nursing. She also took a course in Public Health Nursing in Philadelphia. She was a nurse for the city and had charge of clinics for poor families in different parts of Philadelphia. Later she was a Red Cross nurse in Norristown. She came to Manheim in 1930 and was a community nurse, spending some time in the schools and in a sense was a truant officer.

Barbara was married to the late Walter Bomberger who had a real estate and insurance business in Manheim. He was a Representative in Harrisburg from 1947 to 1954. She has two sons. Walter Lawrence Jr., "Larry", lives with his mother and is an auctioneer and does income tax for people. He and Donald Longenecker are the auctioneers for Conestoga Auction Company and hold the auctions at Root's Country Market and Auction, Manheim R1. Larry also demonstrates auctioning at the Kutztown Folk Festival. The other son, Andrew B., is married to Sylvia Ginder and they have a daughter Sally who is 15 and a son, Jeffrey, 13. They live in Manheim. Andrew is an auto salesman.

Mrs. Bomberger used to have a garden and canned the vegetables. She still cans fruit but freezes vegetables. She has a sizeable back yard which is inviting to birds. She is a member of the Lancaster Bird Club. They meet monthly at the North Museum and go on field trips. Recently they went on a pelagic trip 70 miles out from Ocean City, Maryland. They saw skua gulls, albatrosses, Iceland gulls and gannets.

Mrs. Bomberger is a member of Saint Paul's United Church of Christ, Manheim. She is also a member of the Iris Club in Lancaster. They have two meetings a month. She helps make wreaths, door swags, table and tree decorations, starting in November, for their greens sale the second week of December.

Since this is Girl Scout Month it might be of interest to know Mrs. Bomberger helped organize the Girl Scout Council in Lancaster County. Many years ago she was a Den Mother in Manheim. She also helped organize the Manheim Woman's Club.

Mrs. Bomberger has her home furnished in antique furniture and has beautiful old dishes. She has always been the do-it-yourself type and refinished and upholstered furniture, did her own papering and painting and used to make all her clothing, including dresses, suits and coats as well as drapes for her house.

She took lessons from C. X. Carlson, the artist in the southern part of Lancaster County, and used to paint in oil

According to government studies:

**All Home Oil
Furnaces
Waste 30%
Fuel Up
The Stack!**

Outrageous, yet it's true. A recent study on home heating describes how virtually all oil-fired furnaces allow stack draft to rob precious chamber heat between firing cycles. This translates into decreased thermal efficiency that robs up to 30-percent and more in fuel dollars. Further, this should not have to happen!

There's an instant remedy! Call us for our simple FURNACE FUEL SAVER. It's a quick stack attachment that will begin considerable savings in fuel costs for you today!

and water color. Another craft she enjoyed was making Christmas decorations such as pine cone wreaths and teaching people to make them. She gave talks on Christmas decorations and antiques. She also enjoys cooking. Here are some of her favorite recipes. Why not try her round Easter bread recipes. It might be well to file her Ratatouille recipes until the vegetables are in season and plentiful. Most women are anxious to try new recipes for eggplants and squash when you have so many in your gardens and these recipes call for both plus other vegetables that are abundant at the same time.

Tsourekia (Round Easter Bread)

3 lbs. flour
½ lb. butter
1½ cups sugar
1½ cups of warm milk
6 eggs
2 pkgs. of yeast
1 teaspoon salt
1 tablespoon grated lemon peel (grate through yellow peel only; the white part is bitter)
1 teaspoon vanilla (or ½ teaspoon cinnamon and ½ teaspoon ground cloves)
Sesame seeds
5 raw eggs which have been dyed red

Dissolve yeast in ½ cup of warm water and set aside. Cream butter, add sugar gradually and cream well. Add six eggs, one at a time, and beat. Add grated lemon peel or spices, salt, about half of the flour, and warm milk. Beat until smooth. Add dissolved yeast and beat. Pour this mixture into remaining flour and knead until dough is smooth and elastic.

Cover dough with waxed paper, then clean towels. Let stand in warm place (about 80 degrees) until dough is double original size. This will take about two or three hours.

When dough has risen, punch it down with fist. Divide into two equal portions and shape each into a smooth ball. Allow dough to rest ten minutes. Butter a baking sheet 15½ by 12 inches.

Roll each ball of dough into a long roll about three feet

long and one to one and one-half inches in diameter.

Place the two pieces of dough on baking sheet.

Form a loosely braided ring, leaving spaces for the five colored eggs.

Place colored eggs into spaces of braid.

Cover with waxed paper, then clean towels and let rise in warm place until double its original size.

Brush wreath with beaten egg and sprinkle sesame seed on it.

Bake in preheated oven at 350 degrees for 45 to 50 minutes or until bread is golden brown.

When bread is removed from oven the colored eggs on the top will be hard cooked. Baking colored raw eggs is the traditional Greek method of preparing Easter eggs.

Ratatouille I

(A wet version)

Ratatouille is delicious with roasts, particularly lamb,

4 tablespoons olive oil, more as needed

Vegetables:

2 large yellow onions, coarsely chopped
2 medium green peppers, coarsely chopped
2 cloves garlic, minced
1 medium eggplant
2 medium zucchini

4 cups (1 two-pound can) Italian tomatoes, undrained

In a large heavy, lidded 11 or 12 inch skillet, 2½ inches deep (preferably enameled ironware), or shallow 2½ or 3 qt. lidded flameproof casserole heat the oil.

Cook the onions, green peppers, and garlic slowly until they are tender but not brown. Turn off heat while other vegetables are prepared. Wash the eggplant, cut off the stem, cut in 1-inch cubes. Peeling is not necessary. Wash and lightly scrape and zucchinis, cut off ends, cut in ½-inch slices.

In another skillet, heat more olive oil. Quickly, on high heat, saute the eggplant and zucchini, a few pieces at a time, about 1 minute on each side. (This will require more oil; the eggplant soaks it up.) As each batch is finished, transfer it to the skillet with the onions and peppers. Add the tomatoes to the other vegetables.

Seasonings:

1½ teaspoons salt
¼ teaspoon freshly ground pepper
1 teaspoon dried oregano
1 teaspoon dried basil
1 bay leaf
½ cup finely chopped fresh parsley

Add the seasonings and stir to mix thoroughly. Bring to a simmer. Cover and cook 45-60 minutes over a very low flame, as low as possible, until zucchini and eggplant are tender but not too mushy. Check and correct seasonings, adding any extra salt, pepper or herbs in small quantities to taste. For later serving, cool and refrigerate. To reheat bring slowly to a simmer, and simmer just to heat through. It can also be served cold.

Garnish by sprinkling with ¼ cup finely chopped fresh parsley.

Ratatouille II (Dry version)

Serves 8-10

Cooking time: ¾ to 1 hour.

This is particularly delicious served cold. It is a refreshing first course when eaten by itself, or spread on bread, or served with slices of Hungarian or Polish sausage. Hot, it is a good accompaniment for a pork roast or chops, for a simply cooked chicken dish, for veal. It is excellent for a buffet as relish, vegetable or salad, hot or cold.

Vegetables:

2 or 3 small eggplants
3 or 4 small zucchinis
2 large onions, sliced
2 medium green peppers, sliced
3 cloves garlic, minced
4 cups (1 two-pound can) Italian plum tomatoes, drained
2 tablespoons tomato paste
4 tablespoons olive oil, more as needed

Wash the eggplants, remove ends, cut in ½-inch slices. If slices are very unequal in size, cut the larger ones in half. Peeling is not necessary. Wash and lightly scrape the zucchinis, remove ends, and cut in ½-inch slices. NOTE: Large eggplants and zucchinis will have more moisture.

Lancaster Farming, Saturday, March 15, 1975—45

To extract it, place the sliced vegetables in a bowl, sprinkle them with salt, put a weight on top and let stand for 30-60 minutes. Drain; wash and dry each piece. Cut the eggplant so that slices of it are about the same size as zucchini slices.

In a heavy skillet, heat the oil and quickly saute the eggplant and zucchini slices, a minute on each side, removing them as they are done to a bowl or plate. (More oil will be needed; the eggplant soaks it up.) In the same skillet, heat more oil (4 tablespoons). Slowly cook the onions, peppers, and garlic until they are tender but not brown. Add the drained tomatoes mixed with the tomato paste.

Seasonings:

1 teaspoon salt
¼ teaspoon freshly ground black pepper
1 teaspoon dried oregano
1 teaspoon dried basil
1 bay leaf, crumbled
½ cup finely chopped fresh parsley
Salt and pepper for sprinkling

Add the seasonings except the last. Stir carefully to mix well. Check and correct seasoning.

Turn on oven to 325 degrees.

In the bottom of a heavy lidded 4 or 5 qt. casserole put one-third of the tomato mixture. Next add a layer of ½ of the eggplant and zucchini. Sprinkle lightly with salt and pepper. Put ½ of the remaining tomatoes on top, then the rest of the eggplant and zucchini, salt and pepper; finish with the last of the tomatoes.

Cover and place in preheated 325 degree oven for 45-60 minutes, or until vegetables are tender. Check occasionally. Tip pot and baste with the juices. If it appears too moist, leave cover off for a while. It can be served either hot or cold. For later serving, cool and refrigerate. To reheat, bring to room temperature, place in preheated 325 degree oven for 30-45 minutes, until it is just bubbling and warmed through.

Garnish by sprinkling with ¼ cup finely chopped fresh parsley.

TWO BIG FUEL SAVERS

Shenandoah NO. 1 WOOD HEATER

Easy to install in your chimney or through roof or through a window

All purpose heater for garages, utility rooms, work shops, cabins, small homes and cottages

Thermostatically controlled. A "Simmer" flame will burn a full 24 hours

Features:

- * 11 ga. Top and Door, 18 ga. jacket
- * Stands 35 inches high 24 inch diameter
- * 6 inch pipe collar
- * All parts are replaceable
- * Shipped completely assembled
- * 178 lbs. shipping weight (actual - 164 lbs.)

FUEL SAVER NO. 2 FIRE-GRATE

DOUBLES FIREPLACE HEAT OUTPUT

Features & Specifications:

- * No installation, simple mount blower box to manifold with metal screws provided. Plug into standard 115 V outlet
- * The complete Fire-Grate sets in fireplace - no unsightly tubing or equipment extends from fireplace
- * 100 CFM, 61 Watt blower is completely insulated with cerafelt a product used for insulation in spacecraft
- * Speed Control to regulate blower is optional. After room heats up it can be set at a lower speed to reduce heat
- * Blower can be mounted on either side of grate
- * Overall Dimensions 24 in. high, 20 in. deep 31 in. wide at front 23 in. wide at back
- * Up to 50,000 BTU
- * 2 in., 14 ga. tubes
- * 67 lbs. shipping wt. (actual - 57 lbs.)

LADIES, HAVE YOU HEARD?

By Doris Thomas, Extension Home Economist

Use Caution With Slow-Cooker Low Temperatures

If you are planning to buy or already own a slow-cooker, pay extra attention to which low setting you use. Some manufacturers extend the low-heat range of their slow-cooker to add versatility.

But some slow-cookers permit you to set the temperature below 145 degrees, and if used improperly, may allow bacteria capable of causing food-borne illnesses to grow and survive. Bacteria grow in temperatures ranging from 40 to 140 degrees and may survive in temperatures above 140.

The rule of thumb for preventing food-borne illnesses in high-protein, low-

acid foods is: Food should not remain in the danger zone - 60 to 120 degrees - for more than two hours. Food should not remain in the 40 to 140 degree range for longer than four hours. The two and four-hour periods include preparation, room-temperature storage and cooking time.

For safety, add seafood and milk the last few minutes of the cooking time. From a safety standpoint, dishes with an acidic tomato base rank as less critical than protein foods.

In a laboratory test, the temperature at the edge of one slow-cooker reached 120 degrees in 20 minutes. But one hour and 15 minutes were required to reach 140 degrees in the center. In a

slow-cooker, a three and one-half pound chuck roast reached 120 degrees in the outside one inch in two hours; but it took four and one-half hours to reach 140 degrees in the center.

Spice and Herb Prices Rising

Prices of pepper and other spices and herbs are going up because of speculation, fuel costs, poor crops and competition for growing space. Some of the reasons you are paying more for spices and herbs.

The price of black pepper has risen 50 percent during the past year. Governments in the producing countries such as India and Indonesia or speculators primarily control the pepper market. Add to this the increased cost

of fuel for ocean transport and you have the reasons for the rising cost of pepper. Ground pepper is not expected to disappear from supermarket shelves but it will be higher in price for some time to come.

Poor crops in Madagascar and Zanzibar have more than doubled the price of cloves. Since the supply is tight, you may have to shop around to find whole cloves.

An Indonesian typhoon, governmental problems in the West Indies, and the spiraling cost of trans-

portation have tripled the cost of nutmeg.

Prices of cinnamon are also rising. This country has been importing cinnamon from mainland China since the re-opening of trade relations with the People's Republic of China. Recently, the United States has been able to get Saigon cinnamon, considered some of the best in the world.

Bad weather in California last year has greatly reduced the garlic yield. Competition for growing space, especially in

California, may bring continuing price rises for both garlic and onions. Only California onions are suitable for dehydration.

Yellow mustard seed is also in short supply this year. Vinegar, an important ingredient in prepared mustard, has risen about 50 percent in price this past year.

CUCUMBERS

Cucumbers or other fresh vegetables are perishable so only buy what you need. Keep cucumbers cool—45 to 50 F—and humid and use them within a few days.

Thought For Food

Vanilla Rice Pudding
¼ cup uncooked long-grain rice
2 cups hot milk
¼ teaspoon salt
½ cup sugar
1 teaspoon grated lemon peel
1 tablespoon butter or margarine
1-½ teaspoons pure vanilla extract.

2 large egg yolks, beaten Lemon Meringue

Cook rice and milk 20 minutes or until rice is tender in the top of a double boiler over hot water. Mix the next 6 ingredients and add gradually to hot rice. Turn into a buttered 1-quart casserole. Bake in a pan hot water in a preheated moderate oven (350° F) 1 hour or until pudding is soft — firm and lightly browned. Top with Lemon Meringue. Bake in a preheated slow oven (325° F) 15 minutes.

THERMOMETER

A meat thermometer is the best way to tell when a roast is done. Place it as near to the center as possible, in the thickest part of the roast. The tip should not touch bone or fat. Generally, beef is considered rare when roasted to 140 degrees, medium at 160 and well done at 170.

Ida Risser

We are asked to conserve energy. Somehow it is difficult to do, as we gradually add more labor-saving motors in our homes and barns. Why scrub clothes when a washing machine will do the job and why sweep carpets when an electric sweeper does a better job? Even the farmer succumbs to the advantages of a milking machine or an elevator to lift those heavy bales of hay.

If perchance all the motors humming and buzzing should stop at the same time, I'm pleasantly surprised to notice the sighing of the wind through the evergreens beside the house. Why even the twitter of the sparrows at the bird feeder can be

noticed. We'll just have to keep looking for ways to cut down the size of our electric bill which somehow keeps growing bigger and bigger. xxx

This spring our third child will graduate from college. It is difficult to realize that he is a senior at Penn State. As jobs are not easy to find in a particular field, he will probably do graduate work in agronomy and biochemistry.

Our oldest daughter is taking courses at the University of Washington in Seattle even though she has several degrees already. She tells me she has the "learning bug" and it is due to all the books we have in our home and the fact that we always took time to read to her when she was little.

I always wanted to be a

teacher and go to college but didn't have the opportunity. Now, it seems my children are making up for my lack. My mother tells me she always wanted to write and didn't accomplish it and is glad that I am writing. Apparently, it is true, that the dreams of the parents are fulfilled in the children.

Recipe Exchange . . .

Home on the Range

Welcome to another edition of Home on the Range! What a great response we had to the requests for Union Pie and Shoo-fly Pie! We received so many letters that we couldn't print them all, but selected a few for this week and will save the rest for future use. Thanks so much for helping us with the requests!

Here are two more for you. One of our readers would like to have the recipe for canned chicken corn soup. While another reader has a portion of a recipe for Chocolate Ball Confection and would like to know just how to finish the candy. She stated in her letter that she knows the recipe takes powdered sugar, melted chocolate bits and marachino cherries blended with evaporated milk. If you have this recipe

and can help us out we'd appreciate it.

Remember to be sending in your favorite Easter recipes as time is running out for their publication. We hope to hear from you soon!

xxx

Goody Shoo-fly Pie

Syrup:

1 cup molasses
1/2 cup brown sugar
2 eggs
1 cup hot water
1 teaspoon soda dissolved in hot water

Crumbs:

2 cups flour
3/4 cups brown sugar
one-third cup lard

Put half of syrup in pie crust, than add half of the crumbs. Add remaining syrup and other half of crumbs. Bake at 400 degrees for 10 minutes and reduce to 350 degrees for 50 minutes. Makes 2 pies.

Mrs. A. K. King
Lancaster, Pa.

xxx

Union Pie

1 cup brown sugar
1 cup molasses
2 eggs
3/2 tablespoon flour
3 cup thick milk or buttermilk
1 teaspoon soda dissolved in the milk
Mix all ingredients and pour in unbaked pie crust. Can put stripes of pie dough over the top. Bake at 375 degrees until brown and custard is set. Makes 1 large or 2 small pies.

Mrs. Paul Nolt
Lititz, Pa.

xxx

Spicy Cereal Crunch

1/2 cup butter
one and one-third cup brown sugar firmly packed
1/4 cup light corn syrup
2 teaspoons cinnamon
1/2 teaspoon salt
3 cups puffed oat cereal
2 cups shredded rice biscuits (bite size)
2 cups shredded corn biscuits
2 cups shredded wheat biscuits
1 cup raisins
1 cup pecan halves
Combine first 5 ingredients in a heavy skillet. Stir constantly over medium heat until boiling. Boil three minutes.

In a large buttered bowl, toss cereal, raisins and nuts. Pour hot syrup over the cereal mixture in bowl stir to coat. Spread on 2 buttered baking sheets. When firm break in pieces.

Catherine Shirk
Ephrata, Pa.

xxx

Union Pie

1 cup molasses
1 cup sugar
2 eggs
1 cup thick milk
1 cup sour cream
1 tablespoon flour
1 teaspoon soda
sprinkle cinnamon
Mix ingredients and put in an unbaked pie shell. Bake at 375 degrees for 30 minutes. Makes 1 - 9 inch pie.

Mrs. Alvin Wise
Mohnton, Pa.

xxx

Wet Bottom Shoo-fly Pie

Crumbs:
1 cup flour
1 cup brown sugar
1 tablespoon crisco
Mix and reserve 1/2 cup crumbs for top.
Bottom:
1 cup molasses

3/4 cup boiling water
1 teaspoon soda
1 egg, beaten
Mix with crumbs and put in a 9 inch unbaked pie shell. Top with 1/2 cup crumbs and bake at 375 degrees for 10 minutes and 325 degrees for 30 minutes.

Ella M. Stauffer
Ephrata, Pa.

xxx

Montgomery Pie

Bottom:

1/2 cup molasses
1/2 cup sugar
1 egg
1 cup water
2 tablespoon flour
juice and rind of 1/2 lemon
Top:
two-third cup sugar
1/4 cup margarine or butter
1 egg, beaten
1/2 teaspoon soda
1/2 cup sour milk
1 1/4 cups flour

Combine ingredients for the bottom part of the pie. Pour into unbaked pie shell. For topping, combine butter and sugar. Add egg and beat thoroughly. Add milk and sifted dry ingredients alternately. Spread topping over mixture in pie shell. Bake at 350 degrees for 35-40 minutes. Makes one 9 inch pie.

Mrs. A. K. King
Lancaster, Pa.

xxx

Corn Flake Chews

1 1/2 cup sugar
1/4 teaspoon salt
3/4 cup light corn syrup
1/4 cup butter
3/4 cup water
2 teaspoon vanilla
1/2 cup chunk style peanut butter

9 cup corn flakes
Combine sugar, salt, syrup, butter and water and bring to a boil. Reduce to medium heat. Cook to hard ball stage at 250 degrees. Do not overcook. Remove from heat - stir, in vanilla and peanut butter. Pour over corn flakes in a buttered large bowl. Toss with fork to completely cover corn flakes with syrup. Working quickly, drop mixture in clusters onto waxed paper to set. Makes about 40 2 1/2 inch clusters.

Catherine Shirk
Ephrata, Pa.

xxx

Shoo-fly Pie

1 cup flour
two-third cups brown sugar
pinch of salt
1 tablespoon shortening
1 cup molasses
1 egg
3/4 cup hot water
1/2 teaspoon soda
1/4 cup hot water

Blend flour, sugar, salt and shortening. Take out 1/2 cup crumbs. Add molasses, egg and hot water (3/4 cup). Blend together and add 1/4 cup hot water to which soda

has been added. Pour into unbaked crust and top with crumbs. Bake at 400 degrees for 10 minutes or until nicely browned.

Mrs. Alvin Wise
Mohnton, Pa.

xxx

Shoo-fly Cake

Crumbs:

6 cups flour
2 cups brown sugar
1 cup lard
1 teaspoon soda
1 teaspoon baking powder
1 teaspoon cream of tartar
Syrup
2 cups molasses
2 cups hot water
2 teaspoon soda in a little boiling water

Mix syrup and crumbs. Save some crumbs for topping. Bake at 375 degrees.

Mrs. A. K. King
Lancaster, Pa.

Union Pie
1 cup molasses
1 cup sugar
2 eggs
1 cup thick milk
1 tablespoon flour
1 teaspoon soda mixed with 1 cup sour cream
Add to molasses mixture and pour in an unbaked pie shell.

Mrs. Weaver Leid
Ephrata, Pa.

Home on the Range

Our Junior Cooks have kept us very busy typing and filling the recipes they have been sending in this week. We are featuring some of the varied recipes we have received over the past several weeks. Hope you will give them a try or share them with a friend!

Grandmothers Delicious Gingerbread

1 cup brown sugar

½ cup shortening
2 eggs
¾ cups molasses
2¼ cups sifted flour
2 teaspoons soda
2 teaspoons ginger
1 teaspoon cinnamon
½ teaspoon salt
1 cup buttermilk or sour milk

Blend sugar, shortening, eggs. Stir in ingredients and molasses. Add combined dry ingredients alternately with

buttermilk beat well. Spread in a well greased and floured 13 x 9 x 2" pan. Bake at 350 degrees for 35 to 40 minutes.

Verna Horst
age 13
Leola

xxx

Butterscotch Pudding

2 cups brown sugar
½ teaspoon soda
pinch of salt
1 teaspoon vanilla
½ cup boiling water
2 tablespoons butter
Boil above ingredients till thickened.

Add:

2 cups flour
2 cups brown sugar
3 cups boiling water
2 eggs beaten

Mix together and bring to a boil again. Mix with nuts, bananas and whipped cream.

Christ Petersheim, Jr.
age 8
Gap

xxx

Walnut Custard Pie

1 cup brown sugar
2 eggs, separated
3 tablespoons flour
1 cup water
¾ cup molasses
¾ cup chopped nuts

Mix sugar and flour add beaten eggs. Add molasses water and chopped nuts. Mix thoroughly. Pour into unbaked pie shell and top with strips or separated eggs, using whites for meringue to put on top. If last method is used pour cooked custard into baked shell and put into oven at 325 degrees for 12

minutes. Makes 1 (9 inch) pie.

Elsie N. Reiff
age 14
Ephrata

xxx

Macaroni Salad

3 cups cooked macaroni
2 hard boiled eggs
1 cup chopped celery
1 cup shredded carrots
1 small onion
½ head of shredded lettuce

Dressing
¾ cups sugar
¼ cup vinegar
½ teaspoon mustard
½ teaspoon butter
2 beaten eggs
salt

Boil this mixture until slightly thickened. Cool. Add two-thirds cup mayonnaise. Then add to macaroni.

Lucy Martin
age 12
Fleetwood

xxx

Mince Pies

2 pounds lean cooked ground meat
5 pounds ground apples
2 pounds raisins
1½ teaspoon cinnamon
1 teaspoon cloves
1 teaspoon allspice
1 tablespoon salt
2½ pounds brown sugar
1 gallon cider
1 quart vinegar

Mix and let stand for 24 hours. Put into unbaked pie shells and bake at 350 degrees or until golden brown. Makes 12 pies.

Clair Hoover

xxx

Corn Meal Mush

Stir together:
6 cups cornmeal
3 tablespoons salt
add gradually and stir in 3 pints cold water
Add to 7½ pints boiling water. Cook slowly 1 hour and stir often about every five minutes.

Marlene Sauder
age 13
New Holland

xxx

Oatmeal Drop Cookies

Mix together thoroughly:
½ cup shortening
1¼ cups sugar
2 eggs
6 tablespoons molasses
sift together and stir in:
1¼ cups sifted flour
1 teaspoon soda
1 teaspoon salt
1 teaspoon cinnamon
stir in:
2 cups rolled oats
½ cup nuts chopped
1 cup chopped raisins
Drop rounded teaspoonfuls in a bowl 2 inches apart on lightly greased baking sheet. Bake until lightly browned. 400 degree oven. Makes about 5 dozen 2½ inch cookies.

Farm Women Societies

Society 17

Mrs. Donald Fehran, Wakefield, with Mrs. Elsie Marron and Mrs. John Harnish as co-hostesses. Society of Farm Women 17 met recently at the home of

Following a song-fest, Mrs. Gehron read the devotion which included an Easter message. Roll call was answered by 20 members with "my favorite rainy day pastime."

Donations were voted to Easter Seals and the Mechanic Grove Church of the Brethren.

Reports on the food stand at the Weaver's sale was very successful.

The president, Mrs. Ernest Shaub, suggested having a verbal current events discussion with the members telling of a recent adventure or happening. This was followed by a Spelling Bee conducted by Mrs. Stanley Stauffer. Mrs. John Lefever won the contest.

The next meeting will be held on April 3 at Mechanic Grove. Sewing will be done and a covered dish luncheon will be served at noon.

Society 13

Farm Women Society 13 held a luncheon meeting, Saturday, March 8, at the Lancaster Farm and Home Center, in honor of guests from Society 30 and the Executive Board. There were 24 members and 15 guests present for the event.

The president, Mary Ann McClenaghan presided at the meeting with the entertainment being led by Mrs. Lydia Denlinger.

The speaker for the afternoon was Mrs. Lucille Grenadaal, whose talk was a message to women.

Mrs. Kay Heller led in the singing the theme song, "Brighten the Corner," and also presented two solo numbers.

Society 5

Society of Farm Women 5 held their February meeting at the home of Mrs. Herbert Frey. A Bring and Brag Auction was included in the program.

Society 5 will give \$10.00 to Easter Seals, and voted to contribute to Goodwill as a county project.

Our next meeting will be held at the home of Mrs. Sam Zurin, March 22. The speaker will be Mrs. Lawrence Tucci.

Berks Co. Society 8

Farm Women Society 8 of Berks County met at the

home of Mrs. Donna Hix, Bernville R1, on Tuesday, Feb. 25.

President, LaVern Balthaser presided at the business meeting with 14 members in attendance.

The Ways and Means Chairlady, Shirley Stricker, announced there will be a ham-on-roll sandwich sale on April 5. Orders are to be handed in by March 29. The sandwiches will be made at the home of Mrs. Doris Koenig, Bernville R2.

Plans for the upcoming year were discussed by Mrs. Helen Shirey, head of the program committee.

Announcement was made that Grace Kramer will be the Society's new adopted patient at the Berks Heim.

Sixteen members of the Society will be attending the Spring rally at the Hershey Convention Center on April 30.

The program for the evening was a talk given by Mrs. Jean Johnson, from Met-Ed on the topic "Life as a Minority."

The next meeting will be held on March 25 at the home of Mrs. Shirley Berger, Shartlesville with a Sunshine Party as program for the evening.

Berks Co. Executive Board

Anne Yanos, Berks County President, presided at the regular bi-monthly meeting of the County Executive Board of the Society of Farm Women which met at the Berks County Agricultural Center.

The annual Spring Bingo Party for the residents at Berks Heim is planned for April 3 at 7 p.m. All local societies are responsible for prizes. Each society will also be donating cookies for the Berks Heim Volunteer Tea April 23.

Dorothy Stricker was appointed chairman of the Berks County Convention committee. The convention will be held at the Kutztown Grange Hall October 4.

Final plans were made to attend the Society of Farm Women Spring Rally April 30 at the Hershey Convention Center, Hershey, Pennsylvania.

Joann Ebling was appointed Berks County Publicity chairman.

The group was urged to participate in the volunteer programs at the Hamburg State School. Chairman Carol Zechman suggested many opportunities for local societies to contribute support.

The next meeting will be at the Agricultural Center May 5.

Silver Spurs 4-H Club

The March meeting of the Silver Spurs 4-H Horse and Pony Club was held at the home of Amy Katz, Lancaster. There were 22 members, 3 leaders and 4 parents in attendance. 4-H enrollment cards were completed by members and members received their 4-H cards and project books. The 4-H horse bowl and judging events were explained.

The club will be participating in the 4-H Expo at Park City and will have an exhibit following the theme of running a horse show. The committee members for the Expo are Randy Glick, Jim Glick, Sue Baker, Lenny Matroni, Donna Bare and Cherri Gochnauer. Members of the club were asked to contribute baked goods to the county council bake sale to be held March 15 at the Expo in Park City.

The club members will be enrolled in other fund raising activities such as the County Council Hoagie sale; bake sale and the club's major activities such as its open English and Western Horse

Shows.

Several members and their parents will be visiting the Open House on April 19, at the New Bolton Hospital of Veterinarian Medicine.

The club will hold its Grooming and Showmanship at Rocking G Stables on June 17. Several of the members will be traveling to Colorado on June 28 for the 4-H exchange.

Demonstrations were presented by Ruth Robbins on Horse Diseases and Cures while Jeff Bare demonstrated how to make a rope halter. The next meeting will be held at the home of Sue Baker on April 4.

HISTORIC The Stone House at the National Institutes of Health, Bethesda, Maryland, houses scientists from all over the world who are visiting the institution. Many Nobel laureates have stayed here.

VITAMINS: NATURAL OR SYNTHETIC

Is there a difference between so-called "natural" or "organic" vitamins and synthetic vitamins? The question is a legitimate one and it is important, particularly with regard to the current "back-to-nature" trends which abound in our society.

As an item in the Journal of the American Medical Association said: "The labeling of vitamins as

"natural" implies that they have been extracted from a substance found in nature." Examples given include vitamins A and D extracted from codfish liver, vitamin E from wheat germ oil, Vitamin B12 from liver, vitamins B1 and B2 from yeast, and vitamin C from rose hips.

But because of the cost of such extracting, most vitamins sold today (with the exception of vitamin E) probably are synthetic

vitamins.

So what is the difference? According to Margarita Nagy, M.S., of the AMA's Dept. of Foods and Nutrition, and author of the Journal article:

"Synthetic vitamins are those that have been manufactured by a pharmaceutical company. Biochemically, a vitamin has only one molecular structure; thus, whether a vitamin is extracted from a natural product or synthesized by the manufacturer, its structure is identical in either case, and possesses, consequently, the same biochemical activity."

But there's more to the story. One would suppose as a Berkeley, California pharmacist did, that vitamins sold as "natural" had, in fact, come from natural sources. But when he

visited two manufacturers of "natural" vitamins he observed that many of the products so-labeled contained "synthetic vitamins added to the natural base."

"Rose Hips Vitamin C Tablets" had been adjusted from the original 2 percent to 50 percent by adding chemical ascorbic acid. The pharmacist, Adolph Kamil, said he was told that if no vitamin C were added the tablet "would have to be as big as a golf ball."

Similarly, he found that B vitamins labeled "natural" or "organic" turned out to be "mostly synthetic chemicals added to yeast and other natural bases."

What's my point? It's not to run down vitamins in any

If you have the trees but the neighbor gets the leaves — help him to clean them up.

form, natural or synthetic. But we should know what we are buying. Listen to what Pharmacist Kamil (who is in charge of consumer information and quality control for the pharmacies of the Consumers Cooperative

of Berkeley, Calif.) says: "As for me, I'm going to put my money on good food, fresh and wholesome, from a wide variety of sources, and thereby get all my nutritional needs the most natural way."

THE MYTH OF CLEAN WATER

By Robert Rodale

Residents of New Orleans got some bad news recently. The Environmental Protection Agency told them that the Mississippi River water they've been drinking is loaded with chemicals. And some of those compounds are potent cancer-causers.

That's bad enough. But the hard-headed reaction of city officials was even worse. One suggested that bad water was one of the smaller hazards of life in New Orleans. If a mother wants to insure the safety of her child, one council person said, she should buckle the child's auto safety belt — not worry about tap water. After all, the official continued, the biggest cause of death and injury for those under 35 is auto accidents.

Safety in the short term is all that counts to some people. Chemicalized water is a problem that kills over decades, and isn't going to go away unless strong measures are taken.

A nationwide EPA survey now under way is very likely to pinpoint similar poisons in the water supplies of many other cities. We can expect the situation to get worse before it improves unless we all change our attitudes.

Public indifference to bad water is the biggest problem. A new story or two about cancer-chemicals in water will get people worked up for a few weeks. There will be some protests and letters to the editor. Then a feeling of helplessness will set in. Water has come from the tap for years, and people have been drinking it all along without dropping over dead right away. So why change things now?

Old pioneer attitudes are at the root of the problem. Europeans first came to a country of endless forests and fresh streams, and we, their descendants, have adhered to the belief that a river automatically and naturally purifies itself every seven miles. My mother told me that when I

was a child, and probably it was true then because contaminants only entered a stream at occasional points.

But let's face facts. Most rivers today are overused bodies of water bearing little resemblance to what they're supposed to be. And the Mississippi ranks as one of the worst.

Environmentalists consider the Mississippi "the colon of America," filled with the industrial and human waste products of two-thirds of the United States. Manufacturing plants pour millions of tons of toxic materials into its muddy waters. Oil spills, raw sewage, pesticide runoff . . . you name it. If Americans don't want it, chances are it's ended up in the Mississippi at one time or another.

In the community of East Alton, Illinois, a sign along the river warns picnickers to avoid eating lunch near the Mississippi. They might get sick if their food should ac-

cidentally come in contact with spray from the polluted river.

To me, that the New Orleans water contains things it shouldn't is completely logical. How can a river — any river — recover from a massive load of wastes like those poured into the Mississippi?

Obviously, it can't.

Logic tells me to question another assumption that the people of New Orleans have been making for years.

How can purification systems, built to treat wastewater of another era, deal with the sophisticated wastes of the 20th century, complete with indestructible, man-made substances that have a lifetime of a million years? We're finding out that they can't.

Some myths take a long time to die. The myth that everyone who opens a tap can expect a healthful glass of water may not last much longer, however. When the EPA study of the nation's drinking water is completed in a few months, we'll know for sure.

I suspect that the results will still be challenged. Of course, there will be more press conferences. I'll even be willing to bet some official will publically drink a glass of water just to "prove" that there is nothing wrong with it. Some of the people will turn to bottled water. Others will

shrug off the reports as nonsense. The fact remains, however, that everyone deserves a clean glass of water. Either we will have to stop river pollution at its source, or find new and safer ways to treat water before we drink it. xxx

(Editor's Note: The opinions appearing in "Organic Living" are those of its author, Robert Rodale, an independent columnist. Rodale's comments do not necessarily reflect the thinking of the Lancaster Farming editor or anyone else on the Lancaster Farming staff.)

Automobile Service Tips

WHEN FLUSHING SYSTEM, DON'T FORGET THE ENGINE BLOCK DRAIN PLUGS. TWO ON V8s, ONE ON EACH SIDE OF BLOCK. FIRST DRAIN RADIATOR, THEN THE BLOCK. REFILL WITH WATER, ADD FAST-FLUSH... RUN ENGINE 15 MINUTES. DRAIN SYSTEM AGAIN, FLUSH WITH HOSE AND REFILL SYSTEM.

YORK MALL, YORK

WHAT A WONDERFUL WAY TO LOSE FAT!

THE "MODEL ETTS" WAY HELPS CURB YOUR APPETITE. HELPS YOU LOSE THAT EXTRA WEIGHT. NO CALORIE COUNTING! NO EXERCISES! NO SPECIAL DIETS!

Thanks to a group of New York doctors, you can now lose pounds of ugly fat without going on any special diet, without cutting out any special foods. HELPS REDUCE HUNGRY MOMENTS. These New York doctors discovered a food adjustment called "MODEL ETTS".

"Model-etts" does remarkable things. It helps you cut down your calorie intake by a natural automatic curbing of the appetite and of the desire for food, resulting automatically in a reduced intake of food.

Before "Model-etts" was offered to you, it was tested clinically by the doctors on a large group of non-glandular overweight men and women. The doctors carefully checked results and here is what they found:

1. Weight losses of 6 to 20 pounds without any ill effects whatsoever.
2. 98% of the men and women who used "Model-etts" lost weight.

"Model-etts" is absolutely safe. It is a food adjustment, not a drug. So, start today to shed those unwanted pounds and inches. If your condition is glandular or organic, see your doctor. "Model-etts" may help you stay on the diet your doctor recommends. Ask him about it.

You can get a full month's supply of "Model-etts" for \$3.00 on money back guarantee. In clinical tests, "Model-etts" was 98% successful. "Model-etts" may not be 100% successful in all cases but you take no risk in trying "Model-etts" on our Money Back Guarantee.

Come to General Nutrition to get "MODEL ETTS". The sooner you start, the sooner you may have the loss of weight you yearn for.

Sounds too good to be true, but it is true!

How Model-etts Cures Your Appetite

In the opinion of the supervising physician based on the average of weight losses in the clinical tests, the calculations showed that 1 Model-etts Wafer has the hunger-satisfying capacity of 1 pound honey pastures or 4 eggs or 5 slices of white bread. Yet it contains only 6 calories.

FREE Fruit-Flavored Chewable, Natural VITAMIN C

Taste it... and enjoy the most delicious and complete Vitamin C nutrition that ever melted in your mouth!

Nutritional science knows that you need Vitamin C every day. It affects every single cell in your body. Yet your body can't store it. But without a sufficient supply of Vitamin C your body can't manufacture a special cement called collagen, the cement that holds every single cell in the body together. So you can see how important it is to be sure of getting enough Vitamin C.

That's where Nutrition Square Natural Vitamin C with Acerola comes in. These new chewable Vitamin C tablets have such a wonderfully tangy true fruit taste people love to chew them like candy. Even kids who can't swallow pills will gladly chew their daily Nutrition Square Vitamin C with Acerola. They'll look forward to it, mix in your mouth goodness so much they'll remind you to give it to them (in fact they'll probably ask for more... but how many you give them is between you and your doctor).

We're so sure that once your family tastes Nutrition Square Natural Vitamin C with Acerola tablets everyone in your family will insist on them we're offering you this free taste test. Just fill out the coupon and bring it in to any of the General Nutrition Centers listed here and we'll give you your FREE 14-day supply.

Why Nutrition Square Chewable Vitamin C Tablets are made with Natural Acerola Berries.

The typical orange berry is one of nature's sweetest. It is a naturally rich in natural Vitamin C—up to 80 times as rich as an equal amount of orange juice. The concentrated goodness adds a lot of pleasant flavor as well as nutritional value. And the easiest way to get the goodness is in Nutrition Square Chewable Vitamin C with Acerola tablets.

Grassland FFA Holds Annual Banquet

Members of the Grassland FFA Chapter were recognized for their achievements during the past year at their annual FFA Parent and Member Banquet, held Friday evening, March 7, at the Garden Spot High School Cafeteria.

Following an opening ceremony by the officers of the FFA, Lloyd Hoover, president, gave the welcoming address. Dr. Robert Herr, agriculture instructor, introduced many of the special guests in attendance and expressed thanks to those who had been of aid to the Grassland FFA during the year.

The presentation of FFA

degrees followed with the Greenhand Degrees being presented by Robert S. Woods, agriculture instructor. The Chapter Farmer degrees were presented by the assistant principal of Garden Spot, Mr. Robert Weaver.

Eleven youths received the county Red Rose degrees which were presented by Donald A. Shaeffer, principal of Garden Spot High School. Receiving the awards were: LaVern Martin, Robert Reifsnnyder, Larry Weber, Don Weiler, Brian Musser, Nelson Messner, Arthur Horst and Larry Weber.

Special awards were presented to two area

Dr. Robert Herr (right) presented Mr. and Mrs. John M. Weaver, New Holland R1, with a certificate for having four sons chosen as Keystone Farmers. The award was presented during the annual Grassland FFA Parent - Member Banquet held on March 7.

Several young men received FFA degrees during the Grassland FFA Parent - Member Banquet held March 7. Shown receiving his Red Rose Degree is Tim Stauffer (far right). Presenting the award is Glen

Ulrich, a State FFA Officer with Lloyd Hoover (left) president of the local chapter watching. Donald Sheaffer, principal of Garden Spot High School, (background) introduced the recipients.

couples for having sons as Keystone Farmers. Mr. and Mrs. John Weaver received a certificate for having four sons as Keystone Farmers while Mr. and Mrs. David G. Musser also received recognition for having three sons as Keystone Farmers.

Certificates of Appreciation were presented to several area business people recognizing their help to the Grassland FFA throughout the past year. Receiving the awards were Richard Buch, Penn Jersey Harvestore; Edwin Carson, horse breeder; Ken Good, A&C Equipment; Scott Hummel,

student teacher; David Hurst, feed dealer; Jay Irwin, Assoc. County Agent; Marvin Martin, New Holland Meat Market; William McCoy, McCoy Cattle Co.; Melissa Piper, Associate Editor, Lancaster Farming; Barry Rathvon, Editor - Pennysaver; Christian Stoltzfus, Farm Machinery Manufacturer; Kelsey Smith, Science instructor; John Yoder, Yoder Meats and Tom Buch, Farmersville Equipment.

Following the awards presentation, entertainment was provided by Clint Hammond, a ventriloquist

from the Ephrata area.

Teachers of agriculture for the Garden Spot High School are: Dr. Robert Herr; Mr. Donald Robinson; Mr. Philip Oglie; Clifford Day; Robert Woods; John Johnston; Jerry Oglie; Cheryl Rousseau and Robert Anderson.

xxx

Wheat imports of the developing countries rose approximately 30 percent between 1972 and 1974. But the price they had to pay for their wheat nearly quadrupled in the same period, from \$1.27 billion to \$5.07 billion.

Pesticides Reach Consumers

Those few new pesticides introduced nearly every year beat odds of 10,000 to 1 in reaching the consumer, says Winand K. Hock, plant pathologist and pesticides specialist for the College of Agriculture at The Pennsylvania State University.

Such new pesticides, he claims, cost chemical companies about 5½ million dollars and about 7 years of research and development before the product is marketed. The 7 years cover the time from initial laboratory synthesis of a compound to final government registration of a packaged product.

Biological screening is perhaps the area of greatest importance and highest cost in developing a new chemical compound, Dr. Hock said. This work comes between the initial laboratory synthesis of a compound and field testing of the nearly finished product.

"The scientist must determine the range of biological effectiveness as well as the level of crop safety for a new compound. A new chemical is screened to determine its broadest possible use. It is tested for disease control, as a weed control agent, as a growth regulator, as a controller of nematodes, and as an insecticide. No stone is left unturned," he observed.

Once a compound shows promising biological activity, requirements must be met for information on toxic

effects, crop residues, and environmental impact. Scientists determine the toxicity of compounds based on ingestion, skin contact, and inhalation by test animals. Toxicity levels for animals are required for ultimate federal registration.

The probability of a compound causing tumors, birth defects, or genetic mutations must also be examined, he pointed out.

Crop residue data are essential as a basis for establishing tolerances on food and feed crops. Tolerances represent the maximum amount of pesticide residue permitted on a crop at harvest.

"Environmental impact studies are required to discover any potential hazards the chemical might have for nontarget organisms such as fish and animal wildlife, as well as to determine the behavior of the compound in soil, air, and water," Dr. Hock explained.

When all of these tests are

completed and the information is compiled and evaluated, only then can the pesticide manufacturer apply for a product registration and petition for tolerances, he noted. All pesticide products in the United States must receive a registration from the Environmental Protection Agency (EPA) before being marketed.

Each product bears a label describing the precise uses permitted for that product. Deviation from the label constitutes a violation of federal law. Any changes on the label or the addition of supplemental uses for a particular product must first be cleared through EPA.

"The farmer, home gardener, and environmentalist can be assured that extensive research has gone into any new pesticide product. When used properly, pesticides can be a tremendous asset in man's never ending struggle to increase the quantity and quality of food and fiber," he concluded.

Fruit Supply Outlook

Fruit supplies for the remainder of the 1974-75 season are expected to total substantially above a year earlier. Large citrus supplies continue to dominate the fruit scene. A record U.S. citrus crop of 14.2 million tons is indicated for the 1974-75 season in spite of recent subfreezing temperatures in California and Texas. Yearend stocks of most processed noncitrus products are ample for market needs. Cold storage holdings of major fresh deciduous fruits are also larger than a year ago.

For the first time during 1974, the index of prices received by growers for fresh and processed fruit declined during December to levels below a year earlier. The January 1975 index increased slightly from December 1974, but was still 3 percent below the same month a year earlier. During the first half of 1975 the index is expected to advance seasonally and will likely average near year-earlier levels.

Retail prices of fresh fruit also have declined since last fall, reflecting the seasonal increase in fruit supplies,

especially citrus, but continued to average moderately higher than a year earlier. However, the January 1975 BLS retail price index for fresh fruit advanced slightly from December 1974. As remaining supplies of fresh fruit decline seasonally, consumer prices are likely to advance during the first half of 1975 and average moderately above the comparable 1974 period.

The Nation's orange crop is now expected to total a record 234 million boxes or 10.1 million tons. This output is 8 percent above last season and 4 percent above 1972-73. About three-fourths or 174 million boxes will come from Florida, which expects a 5 percent larger output. California's prospective orange crop at 50 million boxes would be the largest since 1946-47. With a large Navel crop this season, the supply for fresh market is expected to be adequate in spite of the diversion of freeze-damaged fruit to processing. Arizona's indicated production of 4.5 million boxes is 32 percent above last season, while the forecast for Texas as 5.1

million boxes is 23 percent smaller.

On-tree grower returns for all U.S. oranges in January were 13 percent below a year earlier. Large crop prospects combined with large carryover stocks of most processed items will keep downward pressure on orange prices. Current prospects for oranges through early spring indicate grower prices will continue below year-earlier levels.

Prospective grapefruit supplies at 58.8 million boxes are 10 percent less than last season. Florida's crop is expected to total 43 million boxes, 11 percent less than last season, while the Texas crop is 27 percent smaller. Through mid-February, the movement of fresh grapefruit into domestic marketing channels was substantially ahead of last year's pace, while exports and deliveries to processors were lower. With smaller remaining supplies available and recently improved export prospects, grower prices will advance and remain above year-earlier levels.

Indicated lemon supplies in California and Arizona are a record 25.5 million boxes, 46 percent above last season's small harvest. Total shipments of fresh lemons through mid-

February were slightly above last season. Sales of lemons for processing are up sharply, reflecting the larger crop. Grower returns for fresh and processed lemons have averaged sharply below a year ago and are expected to remain low during the remainder of the season.

Supplies of fresh apples remaining in storage are 6 percent above a year ago. So far this winter, average U.S. apple prices to growers have been below year-earlier levels, reflecting larger supplies and slackening processor demand. However, later in the season when most of the fresh apples will come from Washington State, prices are expected to be slightly to moderately higher than a year ago.

In response to substantially larger cold storage holdings, shipping point prices for fresh winter pears have also been below year-earlier levels. Even though these prices may advance seasonally for the remainder of the season, they are likely to continue below year-ago levels.

The 1974-75 pack of canned noncitrus fruit will be considerably above last year's levels. Thus, even with a substantially smaller carryover, total supplies of canned fruit for the 1974-75 marketing season are considerably above those a year earlier. Despite a larger supply, canners' selling prices have increased as a result of higher costs for raw materials, processing, and marketing. The BLS index of wholesale canned fruit prices reached 170.4 (1967-100) in January 1975, an increase of 26 percent from a year ago. These higher wholesale prices have also been reflected at retail. Storage holdings of frozen

deciduous fruits and berries on February 1 were substantially above last season, with increases recorded for most items. Production of dried fruit for the 1974-75 season was moderately below a year ago. However, with a considerably larger carryin at the beginning of this season, supplies of dried fruit are ample. F.o.b. prices of both dried prunes and raisins have been below year-earlier levels reflecting the larger supply and lagging movement.

Disappearance has lagged for many processed non-citrus items - particularly canned and frozen - because of generally higher prices and a slowdown in economic activity here and abroad. In order to encourage an increase in the rate of movement, processors have offered promotion allowances for many items in recent weeks. Although there has been some weakening in prices, they are still substantially above year-earlier levels.

INCREASE YIELDS \$15.00 AN ACRE FOR 25¢

ORTHO ISOTOX® Seed Treater (F) is backed by the best kind of proof a corn seed-treater could have: over one hundred million successful corn acres. All kinds of climate. All types of soil. The Steer That Goes to Market

The steer that goes to market is not all steak. It's not all beef either. From feedlot to packer to retailer, a 1,000 pound steer is reduced to approximately 440 pounds of edible beef.

There's a long road, a lot of feed, nutrients, care, and processing behind the beef you buy today. And today you're buying from an exceptionally large selection at prices trending downward in

the face of an increasing grocery price index, according to marketing specialists of the U.S. Department of Agriculture.

The road the steer will travel will involve thousands of miles. It will go from range, to feedlot, to packing house. It will be fed approximately 2,500 pounds of grain, about 450 pounds of protein supplement, and an estimated 12,000 pounds of hay, silage and grass. All this will take from 18 to 24 months.

Once it has reached the 1,000 pound weight the steer is considered ready for market. After slaughter and initial processing, the packer

generally sells the carcass, which will weight about 620 pounds. The retailer will then trim away about 180 pounds of fat, bone, and waste. He will cut, wrap, and sell the various cuts to the consumer.

Most cookbooks will contain illustrations of the various cuts of beef and suggest ways to use them most efficiently. It's a good time to become familiar with these cuts to be able to readily identify them at your meat counter. It will be helpful in making instant estimations of what your beef dollar is buying in the way of price per serving.

The most tender cuts will

be the rib steaks, tenderloin, porterhouse, T-bone, strip loin, club, and sirloin steaks. These are easily prepared by dry heat. Less tender cuts of meat are the balde, chuck, round steaks, arm chuck and flank steaks; they can be tenderized by marinating and preparing by moist heat.

Whether you're buying porterhouse steak or stew beef, you're sacrificing nothing in the way of

nutritive value. The same perfectly balanced protein power is contained in the same amounts in less expensive cuts as in the most expensive beef.

Bringing beef to your table is no accident. Neither is it quick. It is a well-programmed, highly efficient operation that is responsive to your eating habits and demands.

Preschooler Meetings Set

"You and Your Preschooler: will be the subject of a meeting for Berks County parents and Adults working with toddlers. It will be held at St. Luke's Lutheran Church, 9th & Green Streets, Reading, Pa. on April 1, 1975 at 7:00 p.m. and again on April 2, 1975 at 9:00 a.m.

The session, sponsored and conducted by the Berks County Penn State Cooperative Extension Service, will include a general session on "Children and Discipline", presented by a Family Life Specialist from The Pennsylvania State University. Participants will then select two of four workshops offered: How to develop creativity in the preschooler; How to select preschool educational programs; How to manage with a preschooler and How to use television as an effective teaching tool with preschoolers.

Workshop sessions will include "learn by doing: activities for parents. In addition, educational exhibits relating to the topics will be on display and handout material will be available.

Mrs. Fay B. Strickler, Extension home economist,

Berks County, says that the preschool years are the important ones in setting the stage for a child's future learning. She urges county parents of preschoolers to attend this program. For those parents wishing to bring their small children, a nursery and babysitting service will be provided at the meeting location.

To register for the program on "You and Your Preschooler," call or write Berks County Cooperative Extension Service Office, Berks County Agricultural Center, Leesport, Pa. 19533. Phone - 378-1327.

AGWAY

QUICK ACTION COOLING

YOUR PROFIT SAFEGUARD

Protect the quality and fresh flavor of your milk with modern cooling systems engineered, installed and serviced by Agway.

SUNSET BULK COOLER

The stainless steel evaporator welded directly to the inner liner puts maximum refrigerant flow in direct contact with milk cooling surface for fast cooling action and efficient compressor use. The Sunset is a chore saver too. Simply attach the automatic tank washer to the built-in clean-in-place spray ball and everything from pre-rinse to final sanitizing is handled with the flick of a switch. These enclosed atmospheric models come in capacities from 300 to 3000 gallons. All are constructed of nickel-bearing stainless steel for a lifetime of heavy use.

FELDMEIER MULTI-TUBE PRE-COOLER

Chills milk to 34°F before it hits the bulk tank. So you never chance the rancidity that can develop as warm milk is dumped into a cold tank. And you eliminate the need for continuous agitation, a contributing factor to rancidity and bacteria buildup. You'll save on electricity too. Agway can engineer a Feldmeier installation to fit any milk-house setup, using well water or even pond water for partial cooling. And for even more efficiency there's a Feldmeier Ice Builder or Chiller to fit your system.

For complete information and estimates on Sunset and Feldmeier installations engineered to fit your milkhouse, call Agway and ask for the Farm Systems Engineer to stop by.

Cattlemen Hold Annual Meeting

Cattlemen from all over the state of Pennsylvania, and some adjoining states, met in State College, Pa. Monday, March 3 for their annual meeting, primarily to

On Thursday, April 10, the Cooperative Extension Service will be conducting a seminar on home grounds care and maintenance for anyone wishing to know how to do it themselves. The program will be conducted from 1:00 to 4:00 p.m. and 7:00 to 10:00 p.m. at the 4-H Center, near Blair, Pa.

Program participants for the seminar will be J. Robert Nuss, Ornamental Horticulture Specialist, Penn State University and David A. Hart, Ass't. County Agriculture Agent.

Some of the topics covered will be: Types, sizes, shapes and textures of plants used around the home; lawn care, fertilization, mowing, aeration and seeding; General Landscape Principles on basic design and plant placement; Insect problems; Pruning Practices; and then time for questions at the end. It is being oriented toward the homeowner, so come on out and hear the "how-to-dos" in layman's terms.

Since we will be handing out various leaflets at the meeting, we would prefer that you pre-register by Monday, March 31, 1975. Call 848-2101 or write to David A. Hart, Court House, York, Pa. 17401, and give us your name, address, phone and which workshop you will be attending. There will be a \$3.00 charge to cover the leaflets and other materials handed out at the seminar.

discuss the problems of their industry.

Special guest speaker was Mr. Wray Finney, an Oklahoma rancher, who is serving as the Vice President of the American National Cattlemen's Association. Mr. Finney explained the problems with the over supply of beef cattle, which has depressed market prices, and reduced profits of the beef business, and has even caused great financial losses for some of the larger beef cattle operators. He expects it will take a few years before the over supply situation is corrected, and when once again beef can be produced by farmers and cattlemen at a profit. Finney expressed concern that many beef cattle producers may not continue to produce beef, which will result eventually in beef shortages and less than maximum utilization of the land resources in the United States.

Finney cited actual data in which approximately four

pounds of grain were required to produce one pound of beef. This is much different than the figures of 10-20 pounds of beef cited by individuals not acquainted with the production of beef cattle.

Harry Stambaugh, President of the Pennsylvania Cattlemen's Association, reported to the membership the large numbers of meetings and other events that he and the other officers and directors of the Association have attended on behalf of the Association during 1974. "This Association is

essential if we are to continue to make improvements in the beef cattle industry, and if we are to relate the true story of beef production to the beef-consuming public," remarked Stambaugh.

Bob Coleman, Harrisburg, Pennsylvania, was named 1975 recipient of the Pennsylvania Cattlemen's Association award. Mr. Coleman has served as treasurer of the organization since its initiation almost two years ago. Breakfast the next morning, March 4, was provided by Pro-Lix Company, Alicesville, Alabama.

Thoughts in Passing

Warren C. Wagner

Spring Gardens

by: Warren Wagner
Agriculture Instructor
Lampeter-Strasburg
High School

With spring quickly approaching many people will be thinking about their gardens. Also with higher food costs and the state of the economy it is expected that even more people will be planting gardens this year. Because of this, people who are having gardens should

consider buying their seeds and garden supplies now to avoid the last minute rush and the possibility of being disappointed as seed supplies run out.

Another consideration that many gardeners should be thinking about is the use of manure on their gardens. Manure serves two purposes when placed on a garden or on any ground. The one that most people are aware of is that manure adds valuable soil nutrients. Cattle manure

is rated as containing 10 pounds of nitrogen, 5 pounds of phosphoric acid and 10 pounds of potash per ton. To get the maximum amount of nutrients from manure it should be applied right before plowing. If it is applied long before plowing many of the nutrients are lost through oxidation and some are washed away by spring rains and melting snow.

Another important function of manure in the soil is

that it adds organic matter which makes the soil much looser and a better growing medium for plants. This

organic matter also promotes the increase in the number of earth worms in the soil.

One word of caution about using manure in gardens. Manure is a lot like medicine for the soil. Just because the proper dosage improves the soils health doesn't mean that a lot more will improve it even more. It is possible to give you garden an overdose of manure, especially poultry manure which is very high in nitrogen and will burn your plants.

ESKIMOS

Eskimo is derived from an Algonquian Indian word meaning "eaters of raw meat." In fact until recently Eskimos lived almost entirely on meat and fat, much of it eaten raw

Airville 4-H Club

Airville 4-H Club met recently at Lower Chancetford School. Mrs. Flaharty and Mrs. Hutchenroder presented the awards: Airville T-shirts, 4-H folders and binders were given to deserving members. Leon Crowl conducted his first meeting as our new president. Projects were signed-up - Handy-man, Photography, Tractor, Candle-making have already begun. Dave Norman showed a movie about 4-H. Next meeting will be March 19.

GOODYEAR'S NATION-WIDE FIELD HAZARD ADJUSTMENT POLICY - FARM TIRES

In addition to coverage for workmanship and material related conditions as outlined in Goodyear's Manufacturer's Tire Adjustment Policy, all Goodyear Super Torque, Power Torque, Traction Torque, Sure Torque and Special Sure Grip rear tractor tires except those branded or stamped "NA" (not adjustable) which during their original tread life become unserviceable due to field hazard damage, will be covered under this policy excluding such damage resulting from fire, wreck, mechanical defects, under-inflation, broken or kinked beads or nail punctures.

At our option, we will repair at no charge a tire adjustable under this policy, or replace it with a new Goodyear tire of comparable grade and size, computed on Goodyear's printed Predetermined Price for Adjustment, current at the time of adjustment, which price will fairly represent the actual retail selling price of the comparable tire at the time of adjustment as follows: 25% Charge - with 75% or more tread remaining and in first 24 months of tire service; 50%

Charge - with 50% or more tread remaining and in first 36 months of tire service; 75% Charge - with 25% or more tread remaining and in first 48 months of tire service.

Applicable taxes and dealer services are additional. This policy does not in any way extend to consequential damage resulting from either workmanship or material related conditions or field hazard damage.

Coverage by this policy extends only to tires in agriculture use, excluding logging, industrial, and pulling contest usages.

No representative or dealer has authority to make any representation, promise or agreement except as stated herein.

This Adjustment Policy is not to be considered a guarantee or warranty because any tire may fail in service or otherwise become unserviceable due to conditions beyond the control of the manufacturer such as mechanical condition of the vehicle, improper tire maintenance, field conditions, etc.

Horse Health Meetings Slated

A new law, effective April 1, requiring horses imported to Pennsylvania to have certificates showing negative tests for Equine Infectious Anemia, will be discussed at two meetings this month, it was announced today by Pennsylvania Agriculture Secretary Jim McHale.

McHale said the first meeting will be held at the Agriculture Building here March 19 at 7:30 p.m. The second will be held at the Mercer County Court House March 26 at 7:30 p.m.

Dr. Everett E. Denlinger, director of the department's Bureau of Animal Industry, urged all veterinarians "interested in interstate transportation of horses, horse shows and auctions or examining race horses to attend one of these meetings."

The April 1 import regulations stem from

passage of House Bill 1350, enacted Dec. 13, 1974. Under the new law, members of the horse family, other than those designated for slaughter, transported to Pennsylvania must be accompanied by an interstate health certificate indicating negative results on the Coggins test for Equine Infectious Anemia.

Equine Infectious Anemia, also known as Swamp Fever, is a highly contagious viral disease which is fatal in 30 to 70 percent of the cases. Symptoms, which usually develop two to four weeks after the animal is exposed to the disease, include high fevers, loss of weight, bloodshot eyes, frequent urination and a wobbly or rolling gait. Horses, mules, donkeys and other members of the horse family are affected by the disease. It is not transmissible to humans.

Delinger explained that the Coggins test must be performed by a federally approved laboratory within 12 months prior to the date of entry. A copy of the official test must accompany the animal to its final destination.

Foals under six months of age are exempt from the regulation if they are accompanied by a dam with a negative Coggins test.

All horses imported into the Commonwealth must be accompanied by an approved interstate health certificate within 30 days of date of arrival. It should specify test results, dates, and the type of vaccine administered. A copy of the certificate must be forwarded to the Bureau of Animal Industry immediately upon approval by the chief livestock official of the state of origin.

All horses imported for slaughtering must be consigned to an approved horse slaughtering establishment or an approved Pennsylvania livestock auction. They must be accompanied by either a waybill or an owner-shipper statement listing the number,

description, and destination of each animal.

Before a horse can be imported into Pennsylvania from any state or area where a state or federal quarantine has been invoked, a permit issued by the director of Pennsylvania Bureau of Animal Industry will be required.

Thomasville 4-H Club

The Thomasville 4-H Community Club chose a committee for Kick-Off Week. An exhibit was made and displayed at Southern Pennsylvania National Bank Lincolnway Office. The committee consisting of these members: Bonnie Wire, Katherine and Jonathan Uhl, Larry and Karen Parr, Tommy and Gary Welsh, Tim Eisenhart, Jeff Roth and Allen Keeny also made a poster to be judged at Family Fun Night. The poster was in competition with other clubs throughout the County.

xxx

The world spends about 80 cents per year per capita on fertility control of all types.

Bank Notices

The annual meeting of the shareholders of The First National Bank of Strasburg will be held on March 18, 1975 at 2:00 p.m. The meeting will be held at Historic Strasburg, Inc. and will be preceded by a luncheon. The meeting will include the election of Directors and any other business to be brought before the stockholders.

The shareholders will be addressed by Edward C. Deardon, President of Deardon and Greene, Inc., a Philadelphia based in-

vestment firm that provides investment counsel for the Bank.

The Board of Directors of Farmers First Bank has announced a cash dividend of \$.20 per share payable March 17th to stockholders of record February 28th.

The annual stockholders' meeting will be held at 12:00 noon, March 25th, at corporate headquarters, 9 East Main Street, Lititz, Pennsylvania.

Poultry-Egg Summary

Poultry and egg producers will continue to adjust to strong prices for feed in the first half of 1975. Feed ingredients prices have dropped from last year's peaks but are near year-earlier levels except prices

of wheat and soybeans which are down sharply. Prices of feed will remain strong at least until 1975 crops are harvested.

Broiler and turkey meat will continue to compete with larger beef supplies this

winter and spring. But pork supplies will be down and prices rising. Beef prices probably reached their low for the year in early 1975 and will increase in coming months as supplies of other meats decline.

Broiler and egg output will increase seasonally into spring but will remain well under a year earlier. Turkey output during the seasonally light production months of the first half of 1975 will also be down substantially. Broiler and turkey prices are expected to rise while egg prices likely will decline gain relative to year-earlier levels. However, the extent of this rise will depend on the financial condition of producers and prospects for larger 1975 corn and soybeans crops.

Egg production in 1974 totaled 183 million cases, 1 percent below 1973 and the smallest since 1965. The drop in 1974 totaled 183 million cases, 1 percent 1973 and the smallest since 1965. The drop in production was due to reduced layer numbers. The laying flock averaged about 2½ percent below 1973 levels and the lowest since 1938. Egg production continues lower in 1975 as layer numbers decline further below year-earlier levels. January's egg output trailed January 1974 by 3 percent as a result of 4 percent fewer layers. However, eggs per layer continued higher. Production will increase seasonally in the spring but likely will average further below 1974 levels. Pullets for flock replacements will fall well below the previous year and the rate of lay likely will ease. Nearly 17 percent fewer egg-type chicks were

hatched during August-January for flock replacements through midyear. In addition, eggs in incubators on February 1 were down 7 percent. This indicates that the laying flock will stay well below year-earlier levels through most of 1975.

Egg prices have dropped more than expected in early 1975. Much of the decline has resulted from sluggish demand for egg products. High prices for sugar and cooking oils have substantially reduced baking which in turn has reduced the demand for eggs. Prices likely will rebound prior to Easter (March 30) but decline seasonally in the spring. However, the spring price decline is not expected to be as large as in 1974.

Broiler meat output fell sharply last fall because of the cutback in broiler chick placements in the summer when production costs for most producers rose above market prices for broilers. Output in federally inspected plants during October-December dropped to 8 percent below the same months of 1973.

Broiler chick placements during November were running 8-13 percent below the previous year. However, as feed prices eased, placements gained in December and January. Thus, marketings during January-March will be down around 8 percent. Output will increase seasonally in the spring but with prices hovering near the breakeven point and the uncertainty about future feed costs, producers are likely to hold production well below 1974 levels. Producers likely will expand output gradually later this year if feed prices stabilize or ease further and favorable prospects for 1975

Lancaster Farming, Saturday, March 15, 1975—61

crops develop. Output may reach or exceed year-earlier levels in the closing months of 1975.

Broiler prices did not show their usual seasonal decline last fall and have continued relatively strong in early 1975. Broiler prices have been strengthened in recent months by lower production of broilers, turkeys, and pork. But sharply higher beef production and eroding consumer purchasing power have limited price gains. With lower output of meats, other than beef and veal, broiler prices should continue strong with some further rise in the spring and summer. Although beef supplies are expected to continue larger than a year earlier, prices of cattle may strengthen in coming months and average above 1974 levels, adding buoyancy to broiler prices.

Turkey meat production fell sharply in late 1974 after running substantially above year earlier levels through the first 9 months of the year. For all of 1974, turkey meat output in federally inspected plants was nearly 3 percent greater than in 1973. Turkey stocks increased sharply during the first 3 quarters of 1974 and reached record levels on October 1. However, reduced production and strong consumer demand in the last quarter of 1974 reduced year end stocks to slightly below a year earlier.

Turkey production during the seasonally light first half of 1975 will be well below

1974. September-January poultry production, which will provide most of the production during this period, was 15 percent below a year earlier. Second half output will increase seasonally and may match or exceed 1974 levels in the fall. Turkey prices have weakened in early 1975 as consumer demand lags. Turkey prices likely will stabilize near current levels, then strengthen in the spring and summer as supplies of turkey remain below a year ago. Spring and summer turkey prices probably will average well above last year.

York 4-H Hort Club

Members of the 4-H Horticulture Club met recently at the 4-H Center. Officers were elected and David Hart of the Cooperative Extension Service informed members of how to test their soil for pH and check their plots for proper planting time.

These members were elected to offices: President - Bonnie Wire, Vice President - Megan Shaub, Secretary-Treasurer - Brooke Palmer, Asst. Secretary Treasurer - Paul Myers III, News Reporter - Jonathan Myers, Ass't News Reporter - Steve Trostle.

The Club discussed a trip to be taken later this summer to Hershey. The next meeting will be held Apr. 5 and the grounds of the 4-H Center will be cleaned up.

CONSIGNMENT SALE SATURDAY, MARCH 22, 1975

9:00 A.M.

LOCATED ON THE SALEM CHURCH ROAD SOUTH OF RT. 45, 5 MILES SOUTHWEST OF LEWISBURG.

Charolais Association Announces Bull Sale

The Colonial Charolais Association has announced the date and location of their 9th Annual Colonial Charolais Spring Sale. This year's sale will have unique features not found in any other Association sponsored Charolais Sale in the United States.

This series of sales was initiated nine years ago, and the Bull Sale portion of the sale was established as a Graded Bull Sale - the first such Charolais Bull Sale of its kind in the country. Last year, the Colonial Charolais Association, which covers all of the northeastern part of the United States, revised the sale to a Classified Bull Sale. This new program was immediately popular with purebred breeders and commercial livestockmen alike. Not only does this classification system set definite qualification standards and requirements for the sale, but also it aids the buyer in evaluating the important characteristics in each bull. This same classification system will be conducted at 10:00 a.m. on sale morning, Saturday, March 29, with Herman Purdy, Professor Emeritus at Penn State, and Dr. Randall Reed of Ohio State being the official classifiers.

Another special feature is being added this year to the Classified Bull Sale portion of the Sale. This unique offering will be performance tested bulls coming from the 140 day test at the Colonial Bull Test Station managed by the JCL Cattle Company, Dayton, Maryland. The Colonial Charolais Association is the only association in the country to offer the facilities of a Bull Test Station to its members. The Bull Test will be completed March 7, 1975. The bulls that meet the yearling

weight and gain requirements established by the Sale Committee will be admitted to the sale. However, these performance tested bulls must also pass the classification requirements, on sale day in order to make their final qualification for the sale.

The classification program for the bulls is broken down into four major categories with each bull's overall classification score being the total of the scores for each of these four categories. The categories are: Size for Age; Muscling; Skeletal Correctness and Soundness; and Sex and Breed Character. A maximum score of 100 is assigned to each category making a total possible overall score of 400. The rules as established by the Colonial Charolais Association read that any bull that is to sell must have a minimum score of 300 and cannot have a score of less than 70 in any one of the classification categories. This is done to eliminate inferior or unsound bulls from being sold as breeding bulls.

This classification program is conducted individually on each bull in the sale ring on sale morning. Everyone seated in the sale barn will witness the procedure and be given the results on each individual bull.

All of these procedures assure the new owner of a purebred Charolais bull

CAN'T WIN

Nothing seems to work for old Fred these days. Last week he came into the office a half hour early every morning. Finally the boss said something about it "Fred, are you having troubles at home?"

purchased at the Colonial Charolais Spring Sale that he now has a bull that will produce many profitable calf crops for him.

The age of the bulls that will come to the sale direct from the breeding herds will be from 15 months up to 3 years of age. The ages of the performance tested bulls coming from the Colonial Bull Test Station will be from one year to 18 months of age. There will be a total of 32 purebred Charolais bulls presented for classification.

Mrs. Charlotte Rushton, Executive Secretary of the Colonial Charolais Association, points out that 60 females will also be sold at this sale on Saturday, March 29, 1975. There will be 50 purebred females and 10 recorded percentage

females. All of the females have been thoroughly screened by the Sale Committee at the farm for quality, soundness and producing ability. The majority of the female offering will consist of cows with calves at side or cows and bred heifers due shortly after the sale.

The sale will be held at the Farmer's Livestock Exchange, Boonsboro, Maryland, located on Alternate Route 40 southeast of Hagerstown and will start at 12 Noon. For anyone wishing a catalog or more detailed information contact the office of the colonial Charolais Association at 43 Towpath Road, Levittown, Pennsylvania, or call the Association office at (215) 945-7477.

Lebzelter's Celebrates 75th Anniversary

In these times of change and instability, long-lasting relationships are hard to find. Therefore news of a diamond anniversary celebration marking 75 successful years together invited curiosity. No, the occasion is not a wedding anniversary, but is something more unique — This year is the 75th year of association between the Philip Lebzelter and Son Company in Lancaster and the Goodyear Company.

Lebzelter's and Goodyear first became acquainted in May of 1900, when the Lancaster firm placed its first order for rubber

carriage tires from a two-year-old fast-rising company in Akron, Ohio — the Goodyear Tire and Rubber Company. At that time, Lebzelter's specialized in the bending of hickory for the production of fine-grade wagon wheels.

Since making that first order in 1900, Lebzelter's has carried the winged foot brand exclusively, except during World War II when tires were rationed. This period spans the entire history of the automobile age in Lancaster.

But the history of the Philip Lebzelter and Son Company began long before

automobiles were even thought of seriously, on March 9, 1829 in Naulautern, Wurtemberg, Germany. On this date a son was born to the village burgomaster John Lebzelter and his wife Catherine.

Although Philip was only one of 17 children in the family, in his youth he thoroughly learned the trade of woodturning from his father.

In 1849, 20-year-old Philip sailed to the United States with his brother Wilhelm. After a 38-day voyage which landed them in New York City, the brothers traveled to relatives in Pennsylvania.

Unable to find work in the German settlements in Lehigh and Berks counties, Philip traveled on foot to Reading. He finally found work on a farm in nearby Muhlenburg, where he was paid \$4.00 a month for his labor. Eventually Philip was able to find work in a Reamstown woodturning shop, where he utilized the skills he had learned from his father in Germany.

At the same time, Philip's brother was doing similar work in Allegheny, Pa. At Wilhelm's urging, Philip traveled to Allegheny and joined him. Wilhelm later purchased the Allegheny business for \$1400.

In 1852, Philip moved to Lancaster, where he was hired by the woodturning shop of Bowers & Eshleman. There he worked for one and a half years.

In 1854, at the age of 25, Philip went into business for himself in Lancaster. The sign in front of his small shop

HOT WATER HEATER

Your hot water heater is the second largest energy user in the home. In order to help conserve the nation's energy supply, hot water heater temperatures should be set at 120 degrees. That's hot enough for bathing, washing, and dishwashing. It also saves from 20 to 25 percent of the energy required for the heater.

on South Queen Street read "Eagle Wheel and Bending Works." He stayed on South Queen Street for one year, and then leased a shop on North Queen Street. From there he conducted the business for three years, until his lease ran out and the owner rented the property to another firm.

Lebzelter must have liked the North Queen Street location, for in 1862 he purchased the site and again settled his shop there. The store remained there for over a century.

The goods which the Eagle Wheel and Bending Works produced at this time included second-growth hickory bent rims, shafts, poles, spokes, wheels, bows, reaches, banded hubs, and a specialty of fine grade wheels. Much of the labor-saving machinery used in the shop had been invented by Philip Lebzelter himself.

The same year in which he founded his business, Philip married Elizabeth Heleine, a French immigrant. Their son William carried on the family tradition by learning the trade of woodturning from his father.

William was joined by his cousin Charles Lebzelter and together they operated the business for over 50 years. Philip Lebzelter, who had retired near the turn of the century, died in 1906. Under William and Charles, Lebzelter's continued to be successful.

In 1900, at the dawn of the automobile age, the Philip Lebzelter and Son Company ordered carriage tires from Goodyear. As the number of automobiles in Lancaster grew, so did the Lebzelter business and its relationship with Goodyear.

In 1913 the Lebzelters hired David Reamer to head the brand-new automobile tire department. Since that time, many innovations have passed through Lebzelter's, including the Cord tire, the Balloon tire, the solid tire, and the farm tractor tire, and

more recent developments. William and Charles Lebzelter jointly managed the Lancaster firm throughout the first half of the twentieth century, weathering the home front effects of two World Wars and the great depression. After the deaths of William and Charles in 1950 and 1956, David Reamer, who had been with the firm nearly all his life, took over operation of the business.

In 1966 the Way Oil Company, also a Lancaster business, purchased the Philip Lebzelter and Son Company. Today the firm is operated by Grace W. Jones, president, and Joseph E. Johnson, vice president and general manager.

Lebzelter's today supplies Goodyear tires to scores of associated dealers in Lancaster County, continuing the 75 year old association that began in 1900.

C. H. WOLGEMUTH & SONS ANNUAL ALL DAY SALE

SATURDAY, APRIL 5, 1975
9:30 A.M.

Located 4 miles West of Manheim, PA, Lancaster Co., PA.

Butter Prices Dip

No, the unique flavor of butter hasn't changed. But the price has dropped below that of premium margarine and many people are eating butter for the first time, unfortunately. This includes reporters who write feature stories noting the different taste of butter that buffs know as flavor.

"Some Midwestern grocery chains are featuring butter specials as low as 69 cents a pound, about 15 cents or more below prices a week ago. In some areas, butter is selling for the first time at prices below some grades of margarine, which are as high as 90 cents a pound..." Wall Street Journal, December 23, 1974.

Butter flavor may be better, but a "lost generation" may have missed it because the price spread between butter and margarine was too great.

Not anymore. Food fads fade and diet concerns diminish as butter becomes No. 2 in price and margarine assumes the mantle of the "high price spread."

Evidently price is the consumers' main concern when shopping. In the last six months of 1974, per capita butter sales increased 15 percent while margarine sales leveled off at their 1973 rate. Butter sales will continue to increase as the prices of margarine soar to soybean heights.

Nearly 80 percent of margarine use soybean oil, which has increased so markedly in cost that the price of many margarine is higher than butter in some markets.

According to the Bureau of Labor Statistics, the retail price of butter dropped five cents a pound from December 1973 through December 1974, while the retail price of margarine went up more than 25 cents, an actual price spread decrease of 30.7 cents per pound.

From this corner, as a butter buff, I'm delighted that I can enjoy it more for less. Butter is part of our national heritage from "buttercups" to "knowing which side your bread is buttered on" to "buttering up the boss." No one says "Pass the oleo, please," as a family might forget when company is served butter.

And baking Christmas cookies with margarine seems almost un-American.

In the dairy business, we have advertised that "it's better with butter," and that "butter is what margarine would like to be." If imitation really is the sincerest form of flattery, butter is flattered. But margarine continues to imitate the real flavor of butter and claim that consumers can't tell the taste difference. Nor do most margarine eaters know that the imitation spread has the same caloric content as butter.

Today's consumers have an advantage. Now they can stop buying the new "high price spread" and enjoy the sweet goodness of butter for a lower price. Why not make it a table fact in your home that butter is butter, margarine is margarine, and never the spreads should meet?

Ask yourself why more people are buying butter when its prices are better?

Horticulture Perlite Widely Used

According to latest figures published by the Bureau of Mines of the U.S. Department of the Interior, a sharp increase in usage of horticulture perlite was recorded in 1973. In 1972, 3 percent of domestic expanded perlite representing 12,600 tons went to this growing market while the figure leaped to 5 percent or 20,900 tons in 1973 - an increase of over 65 percent.

According to Robert Milanese, Managing Director of the Perlite Institute, "an increase in perlite usage in this market is also expected for 1974. When the final figures are in, they will probably be in excess of 25,000 tons - up significantly from 1973's record figures. Increased usage may be attributed to several factors including greater reliance on the home garden for food production in a tight economy, need for more intensive crop production because of shortage of fertile soil, changing American lifestyle in that there is a movement 'back to the soil' and greater leisure time as a result of shorter work weeks, earlier retirement, longer vacations and more holidays."

Serving a multifaceted role, horticultural perlite is effective as a soil conditioner in vegetable and flower gardens, lawns and potting soils. Horticultural perlite aerates soil and promotes drainage while retaining moisture and nutrients where plants can get them when they are needed. In

addition, perlite particles are strong and will not break-down in the soil. Of

particular interest to the organic gardener is the fact that perlite is neutral and chemically inert. When produced, perlite is heated above 1600 degrees which sterilizes it thereby eliminating introduction of disease into the soil.

Heated Tent — Lunch Provided

Twin Valley Youths Receive FFA Awards

Approximately 115 persons attended the tenth annual banquet of the Twin Valley Future Farmers of America on Friday evening March 7, 1975 in the Elverson Firehall, Elverson, Pennsylvania.

The banquet opened with the eight chapter officers, sporting dark blue shirts and white ties, entering the firehall under spotlights as the national FFA officers do at the national FFA convention. Following the official FFA opening ceremonies, David Hammons, chapter chaplain

delivered the invocation. Following the family style ham dinner served by members of the ladies auxiliary of the firehall, awards were presented to FFA members recognizing their achievements in FFA and to persons who have helped the FFA. President Robert Stoltzfus delivered the address of welcome, chapter secretary Ronald Smoker recognized guests. Those guests recognized were: Mr. Harold Bamberger, President of the Twin Valley School Board;

Mr. Frank Houck, Mr. Al Hammons, Mr. Joseph Beiler, and Mr. James Runyon all members of the Twin Valley School Board; Mr. Elbert Eberts, Superintendent of the Twin Valley School District; Mr. Harvey Smith, area vocational consultant; Mr. James Haldeman, Berks County Agricultural Agent; Mr. Glenn Shirk, Chester Co. Associate County Agent; Mrs. Peggy Ritzer, Editor of the Northern Chester County Herald; Mr. Fred Ritzer, photographer for the Herald.

President Robert and chapter historian Geoffrey Fultz then presented certificates of appreciation to Frank Stoltzfus, Howard Stoltzfus, Barbara Kurtz, and Mr. Lloyd Lynch.

The parents of our Keystone Farmers were then presented with the Honorary Chapter Farmer Degree by the chapter officers. This award of honorary chapter membership is conferred upon persons who have helped the chapter in some outstanding way. Receiving the degree were: Mr. and Mrs. John Smoker, Mr. and Mrs. George Yohn; Mr. and Mrs. Glenn Fultz, and Mrs. Isabel Simmers.

Miss MaryLouise Duval and chapter members then provided entertainment in the form of a Hillbilly Chorus.

Vice president Douglas Yoder recognized those persons in attendance who helped the chapter during the past year - Mr. and Mrs. Frank Houck, Mr. and Mrs. Ralph Stoltzfus, Mr. and Mrs. Fred Ritzer, Mr. Ed Schwenk, Mr. Floyd Brown, and Miss Duval.

The highlight of the program was to present awards to chapter members. Mr. Wayne Lutz, Vocational Agriculture teacher at TVSH introduced our Star Chapter Greenhand for 1974-75 - Clarence Jennelle - and presented him with a plaque and pin. The Star Greenhand is the outstanding first year

FFA member. Chapter Reporter, Lloyd Simmers, and Chapter Sentinel, Melvin Houck, then recognized the following chapter farmers and presented their chapter farmer pin to them; David Hammons, Mike Aikens, Ben Deaver, Ted Ford, Gale Fultz, Bill Harris, Steve Kohl, Jan Oatman, Ron Scott, Mary Shade, Darrel Stoltzfus, Gerald Norris, and John Sterner. The chapter farmer degree is the second degree of advancement in the FFA. Harold Steve, chapter Treasurer, then recognized the chapter members who had earned the Berks County Degree, the third degree of advancement in the FFA - Larry Stoltzfus, Gary McVaugh, and Doug Yoder.

Chapter advisor Ronald Frederick then presented foundation award medals to various chapter members. Mike Aikens received a pin for participating in the chapter and state chorus and a foundation medal for outdoor recreation. Ted Ford received the foundation medal for agricultural electrification. Gale Fultz received the gold medal the chapter scrapbook received in the state scrapbook contest, Gale is tenth grade historian. The foundation medal for agricultural sales and service was presented to Geoffrey Fultz. David Hammons, chairman of the chapter conservation committee, received the foundation medal for forest management. Bill Harris received the foundation medal for poultry production. Melvin Houck received the foundation medal for soil and water management, he served as co-chairman of our water testing committee, and a chorus pin, for participating in the state chorus. Terry Murray received a gold medal for his project book in the state contest. Jan Oatman and Mary Shade received foundation medals for ornamental horticulture, they care for the 200 plus flowers the chapter has throughout the school. Lloyd Simmers received the foundation medal for his project books in the state contests. Larry Stoltzfus

Lancaster Farming, Saturday, March 15, 1975-65

received a foundation medal for his dairy project, he is the recipient of our chapter chain animal. Darrel Stoltzfus received the foundation medal for home improvement and for chapter safety. The beef foundation medal was presented to chapter vice-president Doug Yoder. Steve Souden received the foundation medal for agricultural mechanics. The two hardest working chapter members collected the most and the most important awards. Awards for swine production, crop production, and the Star Chapter Farmer award were presented to Robert Stoltzfus, chapter president. Chapter secretary Ronald Smoker received the awards for sheep production, placement in agricultural production, a gold project book medal, and the Star Chapter Agribusinessman Award.

Mr. Harvey Smith, vocational consultant, then presented trophies and pins to our six chapter members who earned the Keystone Degree this year. The Keystone Degree is the highest award given within the state. It is given to only 3 percent of the state membership. Only one award is higher, the American Farmer Degree. Recognized were: Robert Stoltzfus, Ronald Smoker, Harold Steve, Loyd Simmers, Melvin Houck, and Geoffrey Fultz. Mr. Smith also commented on the many awards our chapter has received and the quality of its members.

Mr. Frederick then presented retiring officers plaques to each of the senior

officers. David Barth winner of the Greenhant Creed Contest, recited the FFA creed. President Robert and Vice-President Doug then narrated slides on chapter activities for the year, including ones from Kansas City. Following an inspirational speech by Pennsylvania FFA secretary Terry Murray President Robert presented him with a plaque thanking him for the work he has done as a state officer. Terry is a former chapter president, and third chapter member in as many years to hold a state office.

The chapter officers surprised chapter advisor Mr. Ronald Frederick with a plaque thanking him for his efforts in behalf of the chapter. He was also presented with a whipped cream pie, by chapter chaplain Dave Hammons. Following remarks by Mr. Bamberger and Mr. Eberts, the potted mum center pieces were presented to the parents of Keystone Farmers; Mrs. Mast, head of the dining hall; Mrs. Mohl, head of the kitchen; Miss Duval, the first person to sign the guest book; Mrs. Oliver Bleacher, who had the most change; and Mr. Clyde Spotts, who had the most buttons.

R. L. Frederick
Chapter Advisor

TALK TOO MUCH

If Polly just wanted a cracker all the time parakeets would be fine. But sometimes they can be difficult. Like the time Aunt Susie asked hers: "Can you talk? Can you talk?" The unexpected reply "Yes, I can talk. Can you fly?"

State Breed Associations.

Special Spring

COW SALE

Melvin Kolb, Inc.

THURSDAY, MARCH 20, 1975

AT 12:00

At my Maryland Farm Sale Barn, located 1/2 mile Northwest of
Woodsboro, on Route 550, Frederick County.

150 Head

Sale consisting of 50 head of top quality Purebred cows shipped from Canada, New York State, Pennsylvania and Maryland. Some are classified and have D.H.I. records and are from some of the most popular sires of the Holstein Breed.

50 head of the best grade cows you ever saw in one barn milking from 50 to 100 lbs. a day. Many of them milking in the 80 lbs.

50 head of nice first calf heifers all just fresh or close. Some Purebred and other are grades. Some milking 60 lbs. per day. Also summer cows. A few good heifer calves.

If you need cows please come to the Sale and you will get better cows for less money. All cattle hand picked by us.

Any farmer that is moving or starting to farm, we can take good care of what you buy until you move. All cattle T.B. tested and Brucellosis tested within the past 30 days.

Sincerely,

Melvin Kolb

Total Farm Weed Control Practices Gaining Adherents

Agricultural Research Service
U.S. Department of Agriculture

A new concept called total farm weed control is gaining acceptance as the weed control specialist's "answer" to integrated pest management.

Total farm weed control is the process by which a farmer keeps pressure on the weed population in all crops and in all areas of his farm. The best possible methods of weed control are used throughout in order to purge all weeds from the soil profile. Weeds are not allowed to regenerate.

Total farm weed control is essential to the development of high-yielding agroecosystems. The latter must also include effective crop production and insect, disease, and nematode management practices.

A basic goal of the entire approach is the establishment of a quality environment.

Because there are many kinds of weeds with varying periods of germination and highly differing life cycles,

prevention and control of weed populations require an integrated total farm systems approach. The latter includes cultural, mechanical, biological, ecological, bioenvironmental and chemical methods.

Chemical control requires a broad spectrum of selective herbicides, mixtures of herbicides, and combination chemical treatments.

Although our best individual weed control practices have been used effectively, weeds continue to cause losses of about 13 percent of food production, valued at \$2.5 billion annually. It will be difficult to reduce these losses significantly unless total farm weed control is widely practiced.

It must be a farm-by-farm, area-by-area, region-by-region program or a farmer can only make annual progress. Research data shows that a particular weed can actually be wiped out of an area after three years of effective control. Eradication of a weed

specie, however, is not a practical objective.

With complete cooperation, total farm weed control will reduce chemical costs significantly. Here are some of the other benefits:

The general public benefits when farmers follow the concept, because we have fewer weeds in homelawns, gardens, waterways, and recreation sites.

The approach reduces human health problems caused by allergenic and poisonous weeds.

More efficient utilization of energy is realized with total farm weed control. As far back as 1957, our research emphasized that chemical energy would be required more in weed control and that mechanical energy would be used more effectively to transport chemical energy and to accurately place that energy in the specific amount, in the proper place, and at the exact time for it to perform its maximum work.

A 10-year study of chemical and cultural weed control methods by Dr. Fred W. Slife of the University of Illinois, Urbana, has proved that the principle of keeping maximum pressure on the weed population by the use of a series of herbicides and mixtures is not hypothetical. It really works.

It also suggests that crop rotation solely for the control of weeds is of much less importance as compared to previous years when selective herbicides were not available.

In the study, chemical weed control (1)

significantly increased yields, (2) reduced weed seeds in soils, (3) improved harvesting efficiency, (4) reduced labor requirements, and (5) dramatically increased net farm profits without damage to the biological, chemical, or physical properties of the soil.

In accomplishing all this, productivity of the soil was not impaired, nor were there any undesirable shifts in weed populations.

Dr. Slife's study clearly indicates that annual weeds can be controlled in intensive corn and soybean producing areas if the chemical and cultural control practices are based on the kinds of weeds present in the area.

The winter wheat crop under the conditions of this study allowed large numbers of weed seeds to be produced after harvest and, therefore, helped maintain the seed supply in the soil. Failure to control weeds in wheat after harvest poses a particular problem in a total farm weed control program.

Highest yields of an individual crop were achieved when this crop was grown in rotation with other crops rather than grown continuously.

Rotation of herbicides appeared to be a necessity in crop monoculture in order to prevent weeds that are resistant to a particular herbicide from increasing rapidly and becoming dominant.

Advances in total farm weed control have had a far-reaching impact on all phases of crop production, including the selection of crops and varieties, seedbed preparation, methods of seeding and seeding rates. These advances have made possible wide choice of row spacings, plant spacings in the row and plant populations. They also influence fertilizer practices, including time of application and placement.

As pointed out by other authors in this Bulletin, total

farm weed control improves the productivity of pastures and rangelands. The approach also has greatly increased the efficiency of following practices for weed control. The adoption of minimum tillage and chemical following practices greatly reduces wind erosion, improves fertilizer utilization, improves soil structure and drainage, and increases yields and quality

of crops. Total farm weed control deserves the attention of everyone who wants to make weed control easier and less costly. By keeping constant pressure on the total farm weed population, the farmer will increase crop yields, reduce losses caused by weeds, reduce the cost of weed control, decrease the weed seeds in the soil, increase his profits.

PUBLIC SALE

OF FARM EQUIPMENT, FROM
7 FARMS AND DAIRY COWS
SAT., MARCH 22, 1975

9 A.M.

Located 3 miles East of Hessdale, turn off Route No. 222 on Bunker Hill Road to Weaver Road or 3 miles South of Strasburg [May Post Office Road] to Weaver Road, 1 mile West along Weaver Road, Strasburg Twp., Lancaster Co., Pa.

Growers Get Better At Controlling Pests

By Ellery Knake
University of Illinois
Professor of Agronomy
Pest management consultants are a new breed of experts. They have the specialized knowledge, skill and experience to make Total Farm Weed Control an integral part of pest management.

Today's grower is doing a more effective job controlling his weeds, insects, and diseases, because of the tremendous strides we have made in research and technology in recent years. However, selecting the best controls for his specific problems and applying them at the optimum rates and optimum time requires more precise decision-making than ever.

Some growers still apply the wrong herbicide or insecticide and use rates that are too low or too high. Better growers, however, are taking full advantage of university research and professional advice by using best methods for each situation. And they're not

limiting their weed control to the major row crops, either. Many of them are controlling weeds on a total farm basis.

The new concept stresses rotation of crops and herbicides and features combinations of herbicides for broad spectrum control. The advantages are obvious. One herbicide, for example, may give good control of the grass weeds. Another can improve control of such broadleaf weeds as smartweed, cocklebur, jimsonweed, velvetleaf, and ragweed.

Research at the University of Illinois has shown that by controlling weeds in all areas of the farm, we can effectively decrease the number of weed seeds in the soil. This makes weed control easier and less costly. But it also requires a higher degree of management skill.

We are rapidly moving into a new era in which growers are obtaining specialized help in making difficult decisions on pest control. Agri-fieldmen, or pest management con-

sultants as they are often called, are a "new breed" of experts. They are already established in states like California and Mississippi where growers must minimize risks on high profit crops. The concept is gradually developing in other areas.

Consultants may operate in a variety of ways. Some enterprising individuals will be in business for themselves. Some may work for a growers' organization. Some may scout the fields themselves to identify problems. Others may have a special team of scouts and then concentrate on "recommendations" based on what the scouts find.

Universities are gearing up to provide special curricula in pest management so that individuals will be knowledgeable in identification and control of all types of pests - weeds, insects, and diseases. The consultant also needs to understand his soils, such as texture and organic matter. He may also provide soil tests and fertilizer recommendations. In some areas he might aid with irrigation decisions.

Who pays for the service? The grower benefits so he's the one who pays. But isn't this a rather intangible service? In a way it is. It's a lot like that Dairy Herd Improvement Association or Farm Management Services. It's a service to help the grower increase the precision of his management decisions and make his business more profitable.

Human nature being what it is, some growers will readily spend \$10 on a tangible product in a bag whether they really need it or not. But they hesitate to pay for a more intangible service. It will take some pencil work and motivation to get some growers to spend a couple of dollars per acre, but that's part of the challenge!

Precision is the name of the game. By scouting and monitoring fields, a specialist can predict with a fair degree of accuracy whether or not he will have certain insects and when. If

he can be fairly sure of no corn root worms, for example, he can save his clients many dollars by not applying an insecticide.

A pest management consultant knows the texture and organic matter level of the soil and the nature of the specific weed problems; he can recommend a weed control program with precision. This can help assure effective and economical control - using what is actually needed - no more, no less.

But why can't the grower do his own scouting and determine what pesticides to use? Some can, but it takes training, know-how and time - valuable time. A person with specialized knowledge, skill, and experience can usually do a given job with greater precision. That's why a doctor removes your appendix, a mechanic overhauls your engine, and a lawyer makes out your will.

We're living in an age of specialization. And with the wide array of pests and controls, this is a specialized business.

Some dealers or custom applicators are adequately providing complete pest control services for their clients. And many will continue to do so. But some dealers will prefer to have their customers consult a specialist first - similar to the doctor-pharmacist relationship.

Some custom applicators can adequately advise on general needs. But some prefer to concentrate on application after a specialist determines the specific needs. This will help assure greater success and fewer complaints.

Why has the Environmental Protection Agency shown so much interest in pest management? The answer is that they, too, like to encourage precision - to use the pesticides you actually need and not introduce excess amounts into the environment.

Pilot programs are established and are at various stages of development. An increasing number of individuals with foresight and initiative visualize the opportunities and are filling

the void.

(Ellery L. Knake, professor of agronomy and weed control specialist at the

University of Illinois, served as president of the Weed Science Society of America during 1974. He is a member of the American Society of Agronomy.)

PUBLIC AUCTION

(CONSIGNMENTS WELCOME)

FRIDAY, MARCH 21, 1975

Apartment Gardening

Growing your own vegetables is one way of combating the food price dilemma. But you don't need a large backyard to grow vegetables—just a balcony, a porch or a sunny windowsill.

A few seeds planted in containers will provide delicious fresh food and save you money as well. All you need, says Dr. Charles Dunham, extension hor-

ticulturist at the University of Delaware, are some soil, seeds or seedlings, and the sun.

Vegetables can grow in any type of containers—a bucket, box, tub or pot will do. A large wooden tub or window box is probably best if you plan to grow larger vegetables such as tomatoes, peppers or cucumbers. Radishes, chives and other

small vegetables can be grown in small 6 to 10 inch diameter pots.

Proper drainage is an important step in planting a mini-garden. Three or four holes drilled in the bottom of a tub, for instance, should be sufficient. It isn't necessary, but to help excess water drain out, a half inch of gravel in the bottom is a good idea.

Next, fill the container with a soil mix. Dunham recommends using a ready-mix peat type medium such as Peat-lite, Redearth, From-Mix, etc. This material will provide good moisture-retention without waterlogging and is much lighter in weight than regular soil.

If you decide to raise tomatoes, peppers or eggplants, it is best to start them indoors in small peat pots or peat pellets. Transplant them into outdoor containers for balcony use only after they are well-started and all danger of frost is past. Some seeds can be started directly in the container.

Leafy vegetables can stand more shade than root vegetables, and root vegetables more shade than plants that produce fruit-like tomatoes or eggplants. So position containers accordingly.

Proper watering is the next most important factor in the success of your minigarden. Vegetables should get the equivalent of about one inch of rain every week during their growing season. During hot, dry weather, you may need to water your minigarden three or more times a week. Watch that you don't over water; you can kill the plants.

When the soil becomes dry to the depth of half an inch, provide enough water to saturate this area. If you put containers outdoors during the summer, they may need water every other day. After plants are established, feed them with a liquid fertilizer once a week.

Avoid wetting the foliage if

possible, especially if you water late in the evening. Wet leaves encourage plant diseases.

Apartment dwellers have a wide choice of plants they can grow, says Dunham. Tomatoes, peppers, and cucumbers yield a lot of produce in a small space. Lettuce is a quick crop that can be grown in the same container with later vegetables, as can onion sets or scallions. Swiss chard is an excellent green that can be harvested all summer.

Many vegetables make beautiful ornamentals, besides providing good fresh produce. There are at least a half-dozen good patio tomatoes. Small Fry, Tiny Tim, Basket Pak, Pixie and Presto, or any of the plum tomato varieties will do well. Most tomato plants will need some pruning and staking

Conestoga Crusadors 4-H Club

A meeting of the Conestoga Crusadors 4-H Horse and Pony Club was held recently at the home of Mrs. Nancy Jenkins. During the meeting handbooks were distributed to the members and future fund raising projects were discussed.

Jill Taylor lead in a game of "What are you" followed by a demonstration on wrapping a horse leg given by Margy Alexander and Julie Jenkins.

The next meeting will be held on March 21, at the home of Jodi Alexander.

MEAT

Thin steaks from the tender cuts, even in the higher grades, usually are best pan broiled or pan fried. Broil those Prime and Choice loin and rib steaks when they are one-inch or more thick. Steaks and roasts from the less tender cuts should be braised or pot roasted.

grown this way.

Cucumbers are another good minigarden vegetable. Disease-resistant hybrids should be selected such as Burpee Hybrid and Marketmore 70; both are good varieties. With cucumbers, you will also need some kind of trellis support.

"Minigardens for Vegetables," G163, is a useful U.S. Department of Agriculture bulletin, which you can obtain by calling the Agricultural Editor's Office in Newark, 738-2500, or by writing to Mail Room, Agricultural Hall, University of Delaware, Newark, DE 19711.

Farm Credit Totals \$27.5 Billion

American farmers and their cooperatives continued to expand their borrowings through the lending units of the Farm Credit System during calendar year 1974, but at a pace more moderate than a year earlier.

Figures released recently by the Farm Credit Administration show loans made by the System totaling \$27.5 billion last year, a 16.5 percent increase from the \$23.6 billion made during 1973. This is in contrast to a 40.8 percent jump in 1973 over the preceding year.

Loans outstanding at December 31, 1974, stood at \$27.4 billion, an increase of 25.3 percent from the \$21.8 billion for the System a year earlier.

W. M. Harding, Governor of the Farm Credit Administration, attributed the moderation in loan demand to a more cautious attitude among farmers last year compared to the record year of 1973 when pent-up demand caused heavy investments by producers in equipment as well as land. He noted that if inflation were discontinued, the rise in the System's loan volume last year would have been substantially more modest.

The Farm Credit System includes the Federal Land Banks which make long term loans through local Federal

Land Bank Association; Federal Intermediate Credit Banks which provide loan funds for local Production Credit Associations, the System's short and intermediate term lenders; and the Banks for Cooperatives which finance farmer cooperatives. The Farm Credit Administration is the supervisory Federal agency for the member-owned System.

Of the three lending units of the system, the Land Banks showed the largest increases, reflective of the continued escalation in farmland prices throughout most of 1974. Total loans made by the Land Banks last year were \$4.2 billion and at year end they had loans outstanding of \$13.9 billion. These are increases of 29.2 percent from the \$3.3 billion in loans made in 1973 and 25.2 percent from the \$11.1 billion in loans outstanding at December 31, 1973. The number of members having loans outstanding at year end was 417,001, an increase of 6.3 percent from the 420,488 a year earlier.

Production Credit Associations made loans totaling \$14.4 billion during the year, an increase of 10.4 percent from 1973, and had loans outstanding at year end of \$9.6 billion, up 21.6 percent from the year

before. A total of 325,897 members had loans outstanding at December 31, 1974, an increase of 4.1 percent from the 313,188 a year earlier. In addition to PCA lending, Federal Intermediate Credit Banks made \$837 million in loans to other financing institutions during the year, a decrease of 2.3 percent from 1973.

Banks for Cooperatives made loans totaling \$8.0 billion during the year, up 24.9 percent from the \$6.4 billion in 1973. At year end the Banks had \$3.6 billion in loans outstanding, up 38.8 percent from the \$2.6 billion a year earlier. Farmer cooperatives served by the 13 Banks during the year totaled 2,565, down 3.6 percent from the year before.

At the end of the year the System's net worth stood at \$3.4 billion, up from the \$3.1 billion the year before. Of the total net worth, \$2.1 billion represented capital stock owned by System borrowers.

The System obtains its loans primarily through sale of its notes and bonds in the private money market. Last year's sales totaled \$20.5 billion and included \$4.5 billion by the Land Banks, \$9.9 billion by the FICBs, and \$6.1 billion by the Banks for Cooperatives, for a cumulative increase of 20.4 percent.

Included in the overall figures are rural home loans, farm-related business loans and loans to open seas fishermen, new programs which were authorized in the Farm Credit Act of 1971. Last year, loans made for non-farm rural homes totaled \$308 million and at year end there were \$414 million in such loans outstanding. Loans to fishermen in 1974 totaled \$28.5 million and farm related businesses received \$15 million in loans. Land Banks made most of the rural home loans while PCAs accounted for all of the loans to fisherman and nearly all of the farm-related business loans.

ASA Approves Soybean Production

Amid the debate about organized reduction in planting acreage for corn and soybeans, the American Soybean Association (ASA) this week reaffirmed its policy of taking positive action to create demand rather than the negative action of reducing production.

Ralph Jackson, executive vice president of the Hudson-based organization, said that

ASA has been working for the past 19 years to create demand for soybeans by operating a vigorous overseas market development program.

"Should ASA officially or unofficially sanction a reduction of soybean acreage," he said, "our foreign customers would react with predictable horror. Many of them would immediately seek additional

supplies of rapeseed, sunflower, palm oil, coconut oil, fishmeal or Brazilian soybeans."

Noting that about half of the United States soybean production is exported, Jackson added, "Fifty per cent of our market would suffer irreparable harm." Emphasizing that planting decisions are individual choices made by each farmer on the basis of economics, Jackson said ASA would neither tell farmers to plant soybeans "from fence row to fence row" nor ask them to reduce acreage.

"There is a possibility that an organized effort to reduce acreage could backfire and result in increased production," he said. "If farmers think everyone else is reducing acreage, they

may increase their own acreage to take advantage of the expected price increase."

The ASA official also said that, through ASA efforts in Washington, monitoring of soybean exports may soon be abolished.

However, he said, an organized effort to reduce soybean acreage would "certainly result in delay on this matter, and possibly cause tightening of present controls."

Jackson said ASA adopted its policy of taking positive action to create demand rather than recommending acreage reductions several years ago.

"Past experience proves that the policy is sound and is working in the best interest of all soybean farmers," he said. "Unlike other major crops, soybeans have never been under acreage controls, nor has soybean production ever been subsidized by government incentive payments."

"It is imperative that we maintain that policy even in the face of adversity."

Warning on Scabies Outbreak

New outbreaks of psoroptic cattle scabies, a skin disease caused by tiny mites, are raising fears of another widespread onslaught of the malady, according to the U.S. Department of Agriculture (USDA).

Officials of USDA's Animal and Plant Health Inspection Service (APHIS) pointed out recently that in January alone 15 cases occurred, as compared with four during the same month a year ago. Since last July, cases have occurred in Texas, Kansas, Oklahoma, Colorado, New Mexico and Iowa.

From July through January, a total of 32 outbreaks affecting nearly a quarter of a million head of cattle have been reported. This compares with 20 outbreaks for the same seven-month period a year earlier. Of the 32, 14 were discovered by APHIS inspectors at feedlots. Ten outbreaks were found among cattle on pastures, while the remainder were found among feeders or among cattle being pre-conditioned or assembled for market.

During the seven-month period, Texas had 11 outbreaks, Oklahoma, 9; Kansas, 6; Colorado, 3; New Mexico, 2, and Iowa, 1.

State and federal quarantines were imposed to protect the U.S. cattle industry by treatment of the affected and exposed cattle with USDA-permitted pesticides, and by restrictions on both intrastate and interstate shipments.

APHIS officials are warning cattlemen to keep a careful watch on their cattle to help prevent the spread of this disease. Signs of the infection are constant tail switching and rubbing against objects to relieve the intense itching that results from the bite of the tiny, parasitic scabies mites. APHIS officials emphasize that scabies is a costly disease. More feed and time are required to bring affected cattle to marketable weight. Equally important economically is the fact embargoes are often placed by some states on cattle shipments from the infested areas, thus decreasing the number of markets available for feeder cattle.

REFRESHMENTS

Lancaster Co. Bulls Tops Maryland Test

Beechdale Farms', of Bird-in-Hand, Pa., sole entry in the recently completed 140-day Maryland Official Bull Test Program led all other bulls of all breeds in weight per day of age at completion of the bull test.

The bull, Beechdale's Galavant, a 3/4 Simmental yearling, had a weight per day of age of 3.64 and an adjusted 365-day weight of 1366 lbs.

Beechdale Farms, owned by Dr. Thomas D. Conrad, is one of the leading Simmental cow-calf operations in the United States and the largest in the State of Pennsylvania. Last year, Conrad had the highest indexing bull in the Penn State Bull Test Program - a 3/4 Simmental.

Simmental cattle - the fastest growing beef breed in America - are noted for their

outstanding production of milk. Performance testing has contributed significantly to the breed's built-in adaptability, and data comparing Simmentals with other breeds consistently reflect the ability of Simmentals to adapt quickly to environments far removed from their native Switzerland.

Simmentals have muscular, long bodies, are exceptionally docile, and fertility is above average. United States and Canadian production records indicate Simmental calves are weaning up to 25 percent heavier than Angus or Hereford.

Simmentals will grade choice at carcass weights acceptable in today's market.

Lititz-Manheim 4-H Club Meets

The Lititz-Manheim 4-H Community Club met recently for reorganization at the Fairland Elementary School.

Officers elected were: Jere Swarr, president; Tim Swarr, vice president; LuAnn Rohrer, secretary; Kristell Metzler, treasurer; Nancy Mays, news reporter; Beverly Buckwalter and Karen Hostetter, game leaders and Wendy Huber and Beth Jackson as song leaders. Jere and Tim Swarr will represent the club at county council.

Alan Bair, Associate County Agent, spoke briefly to the club concerning the 4-H Expo.

Project leaders for the club are Mervin Peifer, Mr. and Mrs. Jacob Fisher, Jay Fisher, John Huber and Mrs. Paul Stauffer.

The next meeting will be held April 10 at the Fairland Elementary School.

These Sell:

Beauty - 22,310 - 749; Slider - 23,050 - 894; Peaches - 22,420 - 845; Tide - 19,920 - 767; Ike - 19,330 - 778; Melody - 22,030 - 826; Kim - 20,410 - 761; No. 17 - 21,610 - 850; Maxine - 20,090 - 818; Shorty - 19,140 - 713.

A number of cows now milking over 90 lbs.

Sired by ABS and Sire Power Bulls

Currently bred largely to Sire Power sires including Transmitter, Charm, Larry, Crocker, Birch, Dollar, etc.

THE COWS - Large, in excellent condition with beautiful udders!

THE 27 BRED HEIFERS start calving in late April and a number are due in July and August.

THE BULL is registered - A son of Walhowdon President Vernon and just 2 years old.

Catalogs showing freshening dates, breeding dates and production records available sale day.

Sale Under Tent.

Terms: Cash

SALE MANAGER'S NOTE: This is a most outstanding herd of grade Holsteins. One of the best herds for both production and type to be offered at auction this spring. A great place to buy sound, young, high producing Holsteins.

AGWAY

**AGWAY
SHELL FIRM
PROGRAM**

Agway Enterprise Service the total service for poultrymen

Millions of birds have proven the income-building value of the Agway Shell Firm feeding program. Records document a 3 per cent gain in Grade A yield compared to the performance of comparable flocks in ordinary programs.

But there is more to Enterprise service than productive feeding programs. Across the Northeast, poultrymen have learned they can count on their cooperative for total service, even when markets are tight. Service with features like these:

A regional mill network that assures prompt deliveries of fresh-mixed feeds

New feeding and management ideas from studies conducted on the several Agway Poultry Research program farms.

An egg marketing program that really helps Agway members—a good dependable program

Quality ingredients bought in massive volume to help maintain competitive prices on all rations

Technical, practical knowhow extending from poultry housing complexes to complete crop programs.

A consistent control program at each mill for assurance of continuing feed quality, freshness and consistency

The Poultry Enterprise Salesman with practical counsel and help for the poultrymen in his area

Get to know the Agway Poultry Enterprise Salesman. He is ready to help you make the most of the total service, Agway Enterprise Service. Contact him through your Agway store or representative.
